

## Pioneers in the Art of Producing Powerful Digestive Ferments.

During the past decade we have led every advance toward increased proteolytic and diastatic activity. We now invite attention to a few leading products in this line.

**Pepsin Cordial:** One teaspoonful will completely digest 3000 grains of coagulated and disintegrated egg albumen. One fluidrachm will curdle 32 ounces of warm milk in a few minutes. A palatable and active preparation.

**Essence of Pepsin:** Our Essence possesses the same curdling power as the Cordial. In point of proteolytic activity, each fluidrachm digests 2000 grains of egg albumen.

**Liquid Pancreatin:** A concentrated preparation possessing all the digestive properties of the pancreatic fluid. Two fluidrachms will peptonize 16 fluidounces of milk in from one to one and a half hours at 110° F. A permanent preparation, admirably suited to various combinations.

**Taka-Diastase:** Beyond all comparison the most potent form of diastase ever placed on the market, this product has proved remarkably efficacious in dispelling the distressing symptoms of starch-dyspepsia. The clinical experience of distinguished specialists is embodied in the literature which we furnish on application.
