

MUNICIPAL ENGINEERS, CONTRACTORS, AND MATERIALS.

the four inches. that is to say, to the exact distance which separates two consecutive insulated plates. On the other hand, when the waters fall the inverse takes place. The resistances of 10 ohms, occurring successively in the circuit of the galvanometer, cause the intensity of the current to correspondingly diminish, and this is indicated by the retrograde movement of the indicator-needle. Thus, by watching the movements of the needle along the graduated sector of the apparatus, an observer can readily tell the height of the waters in the more elevated district afar off at any particular moment.

The first meeting of the Municipal Council of the County of Wentworth for 1893 will be held in the Court House, Hamilton, on Tuesday, 24th inst.

THOROLD CEMENT

WELL AND CANAL ENLARGEMENT,
RESIDENT ENGINEER'S OFFICE,
WELLAND, April 17th, 1884.

JOHN BAILEY, Esq., Thorold.

Dear Sir,—Yours of yesterday, relative to Thorold Hydraulic Cement, is received. In reply, I beg to say that my tests of the Thorold Hydraulic Cement have extended over a period of twenty-eight years, and have been on a large scale, as exemplified in the locks, bridges, culverts and other masonry on the Welland Canal and Welland Railway, and that the record, which has been invariably satisfactory, is to be found in examination of the structures. The necessary tearing down of masonry and concrete, during the Welland Canal Enlargement, has afforded abundant evidence of the reliability of the Thorold Hydraulic Cement, both in masonry and concrete, and above and under water. I desire no better cement for the class of work referred to

I am, dear Sir, yours truly,

W. G. THOMPSON,
Resident Engineer.

ISAAC USHER & SON,
THOROLD, ONT.

Manufacturers of
