tants

tants, that an old man of 80 years, one of the Caciques of the Iland, addressed himself unto Columbus at his first coming hither, advising him to use his Fortune with moderation, and to remember that the souls of men have two journeys when they leave this world; the one soul and dark, prepared for the injurious and cruel person; the other delectable and pleasant for the men of peace. It is said also of them they knew not the use of money, nor understood the nicetits of Meum and Tuum: Tenants in common to the blessings which the earth brought forth, and Cobens of Nature.

Amongst the Karines of this lland, they mention a Fountain out of which floweth a pitchy substance, which is sound frequently on the Seas into which it falleth, excellent for the Calking of ships: Secondly, a Navigable River (but the name not told us) the waters of which were so hot, that a man could not endure to hold his hand in them. They tell us also thirdly of a Valley 5 Leagues from S. Jago, which produceth stones exactly round, as is made for pleasure; but yet meerly natural. But these no greater Ravities then in other places: nor altogether so great as in H spaniola. Of which they tell us of a fair River, whose waters are Salt, and yet none but fresh streams fall into it: Of another Lake (three Leagues in compass) on the top of the Mountains, into which many Rivers were known to run without any Exit. Neither of these so strange or rare as the Cuchyo, a kind of Scarabe or Bettel: the eyes and wings whereof when opened give so great a light, in the darkest places, that a man may see to read and write by it, as well as by a Candle.

Rivers of most note, i Canie, much annoyed with Crocodiles (a Beast not common in these Ilands, nor elsewhere in this) exceeding dangerous to such as repose themselves on the Banks of the River.

2 Arimao, which disburtheneth it fell neer the Port of Xagua, 3 Riade Porcos, full of Rocks and quick-sands, at the entrances of it.

4 Rio Escanda, passing betwix Habana, and the Fort of Marcanas, 5 Marien, and 6 Tanne, of less note: Besides these there is Xagua, a safe Station and Road for shippinas of a narrow entrance, but large and spacious when once entred, above ten Leagues in length, and of breadth proportionable. So senced on all sides from the winds, that ships lie stere in safety without any Anchor. Some other Baies there be as usefull, though not so considerable.

Towns of most consequence, 1 S. Jago in the South part of the lland, situate about two Leagues from the Main, but in the bottome of a large and capacious Gulf, the most noved Port of all these Seas. Built by Don Diego de Velasques, Au. 1514. Afterwards made a Bishop: See, beautified with a Gathedrel; Come Religious houses; once not inferiour unto any for numbers of People; though now few enough. Baracao, 30 Leagues on the East of S. Jago, the same Foundation as the other; and neighboured by great quantities of Eben-wood. 3 S. Salvador, by some called Bayno, according to the old name of the Province in which it standeth; built by Velasco in the most pleasant and richest part of all the lland; but not fo fitly, as the other, for Trade and Merchandife. 4 Porto del Principe, an Haven Town in the North parts: not far from which is the Fountain of a pitchie or biniminous liquor, spoken of before; which I conceive to be much of the same nature with the Fountains of Naphia in the East. 5 Trinidad, another of Velascos foundations, nine or ten leagues Eastward of the Port of Nagua: once well frequented, but now for laken, and meer nothing. 6 Havana in the North parts, oppolite to Florida, a noted and wel traded Port; fo strongly situate & fortified both by Nature and Art, that it feems impregnable. The Entrances defended with two notable Cafiles; a greater then either opposite to the mouth of the Haven; all so commodiously built, and well planted with Ordnance, that they are able to keep out and scatter the greatest Navy. Neer one of them standeth an high Tower, from the top whereof notice is given unto the Guards, of every thip that cometh within view of the The best affurance, not only of this Hand but the Bay of Mexico; and therefore honoured for the most part with the feat of the Governour, and the greatest Trade of all these Seas: the ships which are bound for Spain from all parts of the Gulf, tarrying here for one another, till all met together, and fetting fall from hence by the Streits of Bahama, amongst the Isles of the Ducaios.

This lland one of the first which was discovered by Columbia: who having almost cired the Spaniards with the expectation, first fell upon the lland of Guabanani, one of the Lacaiot, to which he gave the name of S. Savious. From thence he sailed to Baracoa, on the North of this lland, which he caused to be called Fernandina, in honour of Fertinand the Catbolick, King of Casside and Aragon; at whose charge and the incouragement of Isabella his Heroick Queen, he pursued this enterprise. Landing, he asked the People if they knew Gipango by which name Paulus Veneum calls the life of Japan) and they conceiving that he enquired after Cibao (of great note for the richest Mines in Hispaniala) pointed towards Haye; some of them going with him to conduct him thither. Cuba by this means laid aside, and all the thoughts of Spain upon Hispaniala, where they found many golden provecations to invite their flays till hungeing after more Gold, and some new Plantathons, they passed over hither: and in few years by the prudent conduct of Velascogus such footing in it, and made that footing good by fo many Colonies; that their title and possession was beyond dispute; and so continued to this day.

6. J. A. M. A. I.C. A.

AMAICA lyeth on the South of Cube, from, which distant 20 Leagues, and as much, or very little more, from Hilpaniels. Discovered in the second voyage of Columbus, by whom named S. Jago; that name changed afterwards to Jamaica.

It is in length from fiast to West about 50 Leagues, and in breadth 20. the whole compass estimated at 150. the middle of it under the 18 Degration of Northern Latitude. Of a rich soyl, abundantly provided of all things necessary: well slocked with Cattle, and no less plentifully slored with most sorts of Fruits, which estage sindustry or Nature have supplied it with. Great slore of Getton wood 3, and such
