

## The Uses of a Rural Telephone in Cases of Fire.

The reason so many country fires result in a total loss to farmers' buildings and stock is because assistance cannot be quickly secured.

Eighty per cent of the fires that occur could be checked if aid were promptly summoned.

This is just one of the many instances where the value of a telephone is of vital importance to the farmer.

It's true that you may never have had a fire, but how do you know that you are not likely to have one at any time?

Don't wait until a fire actually occurs and your buildings are destroyed before installing a telephone

Have it installed now and be prepared to cope with a fire or other emergency.

It's in serious cases of this kind that a telephone must act and act without loss of time.

Above all things it must be reliable—it must give and receive the messages sent promptly and distinctly.

Let us send you particulars of cost of installing the most reliable telephone made—one that can always be depended upon.

You can build and operate your own telephone line.

**A Strong, Stay-Tight Connection Where Other Mowers are Weak**

Seventy years' experience, plus a disposition to use the very best materials when it might seem more profitable to cheapen things, is why Frost & Wood Implements excel from the "Quality" standpoint.

Take, for instance, the connection between the Cutter Bar and Main Frame of a Mower. Others use Small Pins, that wear quickly, thereby allowing connection to work loose, and eventually "bang" the machine into a blacksmith shop. We use "large" Bearings for our "stay-tight" connection (see illustration). They

**FROST & WOOD No. 8 MOWER**

fit accurately and there is no opportunity for wear, because Cutter Bar has no chance to work loose from Main Frame. No time lost on the field—no bills to foot.

Another example of Frost & Wood "Quality" is the Pitman Connection of Forged Steel and "the Ball and Socket Joint"—strongest, firmest connection on the market.

Roller Bearings, with heavy boxes to maintain them in perfect position, make the No. 8 run easier than others. Every connection is neat and accurate. The "Internal Gear" cuts out the necessity of a "flying start"—knives commence cutting with first forward step of horses.

The No. 8 Mower and its companion, the Tiger Rake, are on the top-most rung of the "Quality" ladder.
