

TAKE A LOOK AT THE "IDEAL" LOCK

Notice how it wraps itself around the upright and cross wires in a smooth, uniform curve? No sharp angular turns to weaken the strength of the lock. Yet it grips the wires in FIVE PLACES—twice on the upright, twice on the horizontal, and again at the junction of the two wires. Thus it positively prevents either wire from slipping at all—while it allows just enough play so the fence can be erected on hilly ground without kinking the line wires—but keeps the uprights perfectly vertical. No other fence lock compares with the "IDEAL."
