

WHICH PAGE SHOWS THE STATE OF AFFAIRS IN YOUR FACTORY?

THE OLD WAY

THE OTIS-FENSOM WAY

THE INSTALLATION OF AN OTIS-FENSOM POWER ELEVATOR WILL CHANGE THIS TO THIS

Modern business demands modern methods. The business man with modern methods will make a profit where his competitor with obsolete methods will make a loss. No portion of a factory equipment is more important than that which enables merchandise to be handled economically and quickly.

The installation of an elevator means a saving in cost, by relieving the manufacturing floor and avoiding double handling. The upper floor is made as valuable as the ground floor, doubling floor space.

In low-priced elevators the chief consideration is simplicity and reliability. The Otis-Fensom power elevator has been designed and built with these points in view. Years of experience and experiment have made it the best on the market.

We solicit your inquiries and will gladly furnish information and drawings with full particulars for your factory. Write to-day for full information.
