

# How to Become Quick at Figures.

IT is not a so-called "Lightning Calculator," made up of improbable examples with figures to fit, but containing, without pretense to authorship, a valuable collection of rules and suggestions giving the shortest, quickest and best methods of every-day business transactions. Just such information as a few accountants possess, but not found in text-books of to-day.

Incredulous as it may seem, our largest sales are to the largest concerns, who inform us that they cannot let a single new idea pass by that helps to shorten office labor.

Teachers will find many valuable suggestions how to teach the Quick Methods of addition and multiplication, which are of more importance than all other operations combined.

It is not in our province to condemn the text-books on arithmetic of to-day. But the boys and girls fresh from school find themselves poorly prepared for the requirements of the merchant, the manufacturer or the banker, in the simple calculations of every-day business transactions. Simple as it is, and startling as the announcement may seem, scarcely one in ten can add a column of figures correctly, or compute the simplest questions in multiplication without many trials, and they never heard of such a thing as short methods.

Many readers of this circular have undoubtedly often been amazed at the rapidity with which the experienced business accountant makes his calculations, and there must be some rule by which it is done.

## CONDENSED TABLE OF CONTENTS.

	PAGE		PAGE		PAGE
Addition	7-27	Fractions	55-66	Marking Goods	123
Drill table	11-17	Addition	57	Masonry	13
From left to right	17	Contractions	60-66	Multiplication	28-52
General rules	27	Division	58	Aliquot Parts	41-44
Grouping	50	Mixed Numbers	63	Contractions	34-40
Lodger columns	22	Multiplication	57	Cross Method	47
Lightning method	19-21	Relation to	59	Sliding Method	3-33
Results only	8	Subtraction	57	Squaring	48-52
The easy method	23-25	To a Common Denominator	56	When the tens are alike	53
With periods	28	To Lower Terms	56	Multiples, Table of	116
2 and 3 columns at once	15	Freight, R. R.	102		
Aliquot Parts, application of	45	Interest, Bankers' Method	85	Nails	119
Amusing Arithmetic	131-144	By Cancellation	87	Calculating Rates	119
Banks, transactions with	121-122	Common Method	83	Length of	119
Bills of Exchange	76	For Days only	84	Meaning of Penny	119
Brokers' Technicalities	192	More or less than 60 Days	89	Number in a Pound	119
Carpenters' Estimates	115	Partial Payments	92	Notes, Description of	75
Check, How to Endorse	77	To find the Principal	91	U. S. Money	69
Cisterns, round and square	104-105	To find the Rate	91	Valuable Information	75
Drafts and Acceptances	76	To find the Time	91	Weights and Measures	95
English and U. S. Money	80	Vermont Rule	94		
		6 per cent. Method	87		
		512 Rule, or Lightning Method	83		

## FROM THE PRESS.

Accountants and business men generally will find this neat and well-arranged little volume an invaluable aid in all that pertains to the rapid calculations so inseparable from modern business methods. Many persons who "think they know a little about figures" will find some revelations in this book that they never dreamed of. The rules and examples for the quick and accurate casting up of a long column of figures are especially simple and effective. The methods of computing interest are also most valuable. To the regular contents have been added several features in the line of amusement. Instruction, making the book one for the fireside as well as the counting-room.—*Iron Trade Review*.

"How to Become Quick at Figures" is the title of a little volume published by the Woodbury Company of this city. In it is detailed with commendable clearness the methods by which accountants and others acquire wonderful facility in calculation. It does not describe a series of clever tricks, but gives a reasonable method of study, which, faithfully pursued and mastered, cannot fail to effect great improvement in all kinds of mathematical reckoning.—*Boston Post*.

"It contains a great number of ingenious rules for facilitating mathematical processes, and in the saving of time and labor, which it makes possible, would easily pay for its slight cost a good many times over.—*Post-Journal*."
