

# PUTREFACTIVE PROCESSES.

As an antiferment to correct disorders of digestion, and to counteract the intestinal putrefactive processes in the summer diarrheas of children, LISTERINE possesses great advantage over other antiseptics in that it may be administered freely, being non-toxic, non-irritant and non-escharotic: furthermore, its genial compatibility with syrups, elixirs, and other standard remedies of the *Materia Medica*, renders it an acceptable and efficient agent in the treatment of disease produced by the fermentation of food, the decomposition of organic matter, the endo-development of fetid gases, and the presence or attack of low forms of microzoic life.

An interesting pamphlet relating to the treatment of diseases of this character may be had upon application to the manufacturers of LISTERINE.

**LAMBERT PHARMACAL COMPANY,**  
ST. LOUIS.

**Why Not?** Why not prescribe cream and call it something "just as good as cod-liver oil?"

Why not prescribe petroleum oil or kerosene and call it a "substitute for cod-liver oil?"

**Because** There is no other oil like cod-liver oil. No other oil has the slightest resemblance to it in therapeutic power. No other oil is recommended in its place by a single authority on therapeutics.

*It is a clear case of cod-liver oil—or nothing.*

## Scott's Emulsion

Contains the whole oil, thoroughly emulsified, and combined with the hypophosphites and glycerine. It has been the one standard for a quarter of a century. It never separates, and is practically odorless and tasteless.
