31 Wed.		5 44	6 26	12 04	11 04	8 24	3 13	Allies ent. Paris, 1814 pleas't

Climate, Soil, and market, are the three principal considerations in determining which is the best kind of sheep in any given locality, wet seasons and wet soils are destructive to sheep. The temperature of a Sheep is higher than other domestic animals. Nothing tends to lower this temperature so long and so suddenly as the saturation of the fleece to the skin by wet; and in proportion as the temperature is lowered the sheep loses health and condition. Mere dry outward cold has little effect upon the sheep, his wool perfectly protects him, all that our climate requires to guard against injury, in this respect is reasonable shelter at certain seasons of the year.

MARCH.—Derives its name from the Romans, being originally the first month it was named after Mars, which seems natural considering the importance they attached to it. The legal year began in England, on the 25th of March, down to 1752, when the change of style took place.
