VOL. 65 Fredericton, N. B., November 29, 1945. No. 9

(An English essay by a Freshman Engineer.)

The first step in keeping the peace is to get rid of fear and suspicion of other races. To do this we must show tolerance and understanding. By this I mean to say that we must get to know the other people of the world through books, travel and correspondence. We must understand that because they do not live exactly as we do and speak the same language that we do does not make them inferior to us. We must be sympathetic to the different conditions they live under and therefore the differences in their modes of life. We should be careful to get unbiased opinions and should be wary or highly colourful newspaper articles which portray other friendly nations as murderers and barbarians. And above all we must feel that all people are equals. In order to accomplish these points it is my belief that there should be an official international news organization, run co-operatively by the United Nations, which would give the people of all nations the truth about each other. Through this organ there could be a greater exchange of public opinion, which would do much to create a better understanding between nations.

The dictators came to power when their countries were in the grip of serious depressions. As there is always bound to be a great deal of unrest and discontent when a country suffers a depression, we must find some way of dealing with this problem. It is imperative that the great nations should form some kind of commission to assure the world that they will jointly help any country that suffers a depression. That is to say, a commission should be set up to study the situation and to make recommendations to their respective countries as to how they must help out the nation, which is hit by the depression. This is necessary, as we have seen by past experience that depressions spread and so must be stopped before they do spread to other nations.

It should also be our aim to raise the standard of living in the world. This would do probably more than anything else toward the solution of our problem as men are less liable to want a war when they are contented and happy. This would also prevent the rise of dictators as there would be less discontented people for them to stir up. Apart from these factors, raising the standard of living would mean posterity for the industrial nation, which would have full employment, as it would have to supply the agricultural countries, and of course this would raise their standard of living too. This should be a never ending cycle with the world in general becoming more prosperous and contented.

In my opinion, tradition, and to a great extent national patriotism, should be toned down. This would have to start in the schools where, from the first history lesson, children are taught history with an over-emphasis on the infallibility of their own country. This of course leads to a smug feeling of racial superiority which in turn leads to looking down on other peoples as foreigners. Children should be taught that primarily they are citizens of the world and secondly of a certain country. This of course leads us to the fact that we should strive eventually to obtain a world federation of states, and of course to a universal language in order to be able to converse with other citizens of different extractions. This world federation could well develop from the United Nations Organization which recently met at San Francisco. As a central parliament the old League of Nations buildings at Geneva, Switzerland, could be used and sessions could be held much as our own Federal Government sits now. As for an International language Basic English could easily be taught throughout the world as a secondary language and this would enable easy correspondence between the different races. This increased correspondence would of course lead to a greater exchange of views which in turn would tend to create better understanding among nations.

DOIN'S

We thought, along with a lot of other people, that it was the best formal yet. A great big bouquet of gardenias to the Social Committee for arranging such a super swell dance. If you remember correctly, a few weeks back we were promising a surprise for the dance, something the Committee was making by hand. Well, the remarks of the orchestra will suffice in appreciation of the orchestra stand—"Just like Hollywood" (no, Milton, Hollywood, not New York). Also, the little sid lights were made by the committee. They gave the most pleasant glow yet experienced at a dance. Not too bright, not too dark. And the supper... well... it was more than extra. We understood the Order of the Eastern Star arranged the food. A glance at the physiognomes of those present showed the surprise and pleasure at having the formal again or the pre-war standard of having supper dances. Just a note to those from down town who couldn't get in but wanted to; We don't see how any more could possibly get in.

Important event last week beside the formal: Veterans 'do' on Saturday night. A jolting dinner, copious amounts of 'cheer', speeches, toasts, and a sing-song of Army, Navy and Air Force songs (need we say more?) added up to one of the best banquets ever held. The Veterans unanimously agreed that there should be a 'Smoker' every week. On proceeding outside at twelve o'clock they saw some kind of stuffing spread over front street. On further examination it was found that the seat in George's car (that the Fire Department had come and put it out, ripping most of the seat apart. Hence the stuffing on the street. We interviewed George, his only remark was—"Ha Ha Ha". At least one college student has a sense of humor.

Scene in the Gym on Saturday Afternoon: Student in bleachers reading (Shhhh!) "Kitty". How to study.

So long for a while—we are distributing cribs at the door for those who have not followed our advice. The cost?—\$4,000,045.666 per sentence crib.

Seniors Set

(Continued from page one)
start two days earlier than at first anticipated, drastic changes would have to be made. This necessitated another meeting which was held on Monday evening.

Amid comments such as 'Change that Chem 210 ...' and 'We can have Genetics in the afternoon ...' the meeting was called to order, and the assembled seniors settled down to a session of requests and compromises. Gradually order grew out of chaos, and on the blackboard provided, there appeared the complete time-table of senior exams. To this must be added the exams of the Juniors, Sophomores and Freshmen, before the full schedule appears on the bulletin board.

Virtue itself turns vice, being misapplied.

The Olympic Games should be recommenced immediately and their scope broadened to include the arts and debating. This would help to create better understanding between nations and give young men and women the chance to meet people much like themselves from all the other countries of the world. It also gives nations the opportunity to see Athletics which are not played in their own country which again shows them how other people amuse themselves and take their exercise. The main good the Olympic Games produces is the clean spirit of friendly rivalry and good sportsmanship which statesmen could well afford to copy. The Games would also show young people of the world that there is no super-race as champions would come from many different countries and be of many different racial origins.

As a means of assuring the world that the resolutions and international legislation passed by the United Nations Assembly would be kept I would suggest a strong international police force. Such a law enforcement agency could nip any aggression in the bud and would give the United Nations Organization the power that the old League of Nations lacked. This force should comprise of an army, navy and airforce as well as an intelligence service which would be able to keep the Organization aware of any threats to the peace. The international police force could then be put into action and stop any war or disturbance before it got under way.

For a solid foundation upon which to build a lasting peace it will be necessary to settle the problems of the British in India, the Jews and Arabs in Palestine, the Indonesians and Dutch in Java and the Communists and Nationalists in China. It would be necessary to get rid of the discontent in all these lands and to find some means of giving the people involved complete independence in order to avoid internal troubles, civil wars and revolts which are always a threat to the peace of the world. It is my belief that the United Nations Assembly should mediate these problems as their immediate settlement is of the utmost importance to world peace and security.

Finally, the development of Atomic Power should be one of the deciding powers in assuring world peace, as it is now impossible to wage war without destroying civilization in the process. The Atomic Bomb should be given to the World Security Council in order that it may never be used as a threat to dominate Power Politics. This would put all the nations on an even footing and would certainly make it evident to the world that war would end civilization as we know it.

Summarizing the whole problem: the answer to the question, "How can we keep the peace?" is to create an atmosphere of confidence, understanding, tolerance and equality among the nations by all possible means.
