

BANK OF BRITISH NORTH AMERICA,  
St. Johns, Newf'd, Dec. 10, 1855.

On application of Mr. Smith McKay, I hereby certify that freestone from the Acadia Quarry, Pictou, Nova Scotia, was, I understand, used in the front and inside work of this bank, which was erected here in the year 1849.

The above stone has been found to stand the climate of this country, and I safely recommend it as a good building material for either outside or inside work.

ANDREW MILROY, Manager.

I certify that freestone from Acadia Quarry, Pictou, Nova Scotia, was used in the Cathedral Church of this Diocese, both for outside and inside work, as quoins, mullions, label molding, corbets, &c.

I consider it an excellent building material, it works easily, is susceptible of nice carving, and is not injured by the severe frosts of this climate.

THOMAS F. H. BRIDGE, M. A.,  
Archdeacon of Newfoundland, &c.

THE RECTORY, St. Johns, Newf'd,  
Nov. 27, 1855.

I can indorse the contents of the above certificate.

JAMES S. CLIFT,  
Late Church Warden.
