

# “Marion”

## Revolving Steam Shovels

Built along the same lines in point of material and workmanship as the Marion large size shovels. These Revolving Shovels are built in two sizes, viz.,  $\frac{3}{4}$  and  $1\frac{1}{4}$  cubic yard dippers, and will stand up under the hardest work. The body of shovel revolves around a pivotal journal and is carried by five broad face conical steel rollers.

For a small, handy, quick acting, powerful steam shovel, there is nothing to approach either our Model 30 or Model 35.
