

to the dyer. Then came in quick succession greens, violets, blues and yellow coloring matters, all the hues of the rainbow, and at the present day the number and varieties of colors are bewildering.

"We are indebted to coal tar not only for beautiful colors, but also for some of our most valuable drugs. The valuable drug, antipyrine, discovered in 1783 by Dr. Knorr, of Erlangen, is considered even better than quinine as an assuager of fevers, and is much cheaper in price. Another is thalamm, discovered by Skraup, which has the special power of mitigating yellow fever, or the yellow jack, the dread of every colonist. Phenacetine is still another, possessing valuable antipyretic properties. Sulphonol, discovered by Professor Baeyer, is a hypnotic. But perhaps the most remarkable substance obtained from tar is saccharine, 220 times sweeter than cane sugar, useful for sweetening fruit preserves, jams, jellies, etc., where ordinary cane sugar would mold and ferment in course of time. A most interesting and important property is that it does not nourish and fatten the body as cane sugar does. Hence it is of value in certain troubles like diabetes, where it is often recommended by the physician for sweetening tea or coffee in place of cane sugar.

"Vanillin, now obtained from this tar, is a delicate flavoring essence resembling the true vanilla from the vanilla bean, and the cultivation of the plant in the Cordilleras and Mauritius has been greatly restricted, from the introduction of this artificial vanilla. By mixing essence of mirbane with a certain proportion of this coal-tar vanilla Lord Roscoe has prepared a delightful perfume known as "white heliotrope," and

Want rollable party to manufacture on royalty or will sell patent. Figures 1 and 2 represent and show lady and gentleman seated in their rocking chairs, to which the "Rockaway" attachment is fastened by means of screw eyes, two fastened in rocker and two in foot rest, a rod passing through them.

Figure 3 shows the attachment as in figures 1 and 2, fastened to rocking chair, but here the spring that holds the foot-rest up is fastened to the crosspiece of a stand instead of ceiling as in figure 1 and 2.

Full particulars upon receipt of inquiry.

THE CYCLONE GRATE BAR CO.,

(Limited)

10 King St. West, Toronto, Can.
DEAR SIR:—We have much pleasure in bearing testimony to the good results we have obtained from the Cyclone Grate which you installed in our boiler furnace.

In the first place we figure it saves about 25 per cent. in fuel; (2) it increases the draught; (3) it increases the steaming capacity of our boiler; (4) it shakes easily without strain on the boiler pipes; (5) it frees the ashes from the fire, and the ash shows good combustion; (6) the revision of our combustion chamber and bridge wall to the inventor's idea, we believe, has been of good service to our boiler.

Wishing you every success, which we think your invention well deserves.

We remain, yours truly,

"D. GUNN, BROTHERS & Co."
