Michael Selim Vice President Sales

Belbois Ltd. is a company that started its operation in 1974 and was manufacturing audio/video cabinets for large electronic audio/video manufacturers. In 1990, Belbois expanded its market to wholesalers and distributors of electronic audio/video equipment. In 1991, the firm began exporting to the U.S., a highly competitive market.

Presently, Belbois Ltd. sells \$12 Million annually and exports half of its products to the U.S. and Europe. Located in Montreal, the company has 70 employees, facilities of 52,000 square feet, many computerized production machines, and produces a wide variety of audio/video furniture. The firm recently introduced a new line of home/office furniture with a unique design and finishing especially created for the European market.

The firms' design staff uses modern computerized techniques to develop a new style of furniture and company paint specialists have created new techniques to develop unique finishing paints. This creative approach has enabled Belbois to double its sales during the last 2 years.

Believing in future growth, Belbois is planning an expansion of it's production facilities from 52,000 to 75,000 square feet. This expansion will allow more flexibility for new machinery to meet the challenge of a wide international market.
