

Dr. A—, of this city, but a few years since, who is to be responsible for the mode of examination?

If men will allow their wives to be thus privately examined by these crafts, for the purpose of pardoning their sins and removing their indecent disorders, will they not soon claim all the indecent jobs in their families? If it be indecent for a man to be present at the birth of his child, why not equally indecent to be present at its generation? And so we must let the priest and the doctor generate, as well as bring into the world, all our children! The priest could still baptize them in the name of the Father, Son and Holy Ghost, in whose name, also, he might pardon the sins of their mother! In this way, those two crafts might liberate the affectionate husband from all the toils of his family, excepting that of their maintenance!

Arouse, husbands, from your lethargy. Gird on every man his sword by his side. The sword of truth, I mean. Go in and out of your camp, and whenever you please, till you have driven all such miscreants from your borders. Take the protection of your wives and daughters into your own hands; keep them at home at all proper times, and when they go to meeting, go with them; when they are so sick as to need a doctor, which, if properly treated, would seldom be the case, be present at the examination; if they need prayers, pray for them yourselves; if they want children, be sure to be their real father, and take a fatherly care of them in bringing into the world, as well as afterwards; nourish them with due attention, instruct them in all that is good; but save them, by all means, from the pincers of learned doctors, or the fears of missionary *mules*.

All people who have been attended by Patent Doctors are cautioned against putting themselves under regular doctors, as the cases have generally proven fatal to the patient, and the blame palmed on the Patent Doctor; some after two weeks in their care.

#### SEAMEN'S DIRECTIONS.

After purchasing the right, and having a sample of medicine numbered, these directions are the first lessons learned, as it gives a short and concise view of the system and practice. In the first stages of disease, one gill of No. 3 may
