**Practical Chemistry and Chemical Analysis.**

**KING'S COLLEGE, WINDSOR.**

The Governors of King's College have to announce that they have imported a collection of apparatus and chemicals, and fitted up a Laboratory, suitable for the prosecution of chemical researches, under the superintendence of the Professor of Chemistry in the University.

Professor New, who has acquired his experience in the first laboratories of England and Scotland, is now prepared to direct the studies of those who may wish to become acquainted with the practical details of a science, the knowledge of which is valuable to all, and necessary to those who follow various occupations. Students may pursue, independently of others, and at their own expense, in them a general course of experimental chemistry, and after acquiring a sufficient acquaintance with the modern modes of Analysis direct their attention to any particular branch of study, (as for example, agricultural, metallurgical, mineral or medical chemistry), in which they may wish to pursue original investigations.

A scale of fees is manifestly payable by all who engage in these practical studies, to indemnify the University for necessary loss of material kindred; the fees are regulated according to the number of hours and days devoted to the course; apparatus is supplied for students' use, and all breakages are to be made good by them at cost price. The Professor is also ready to furnish a course of Analysis, or of Coal, Metallic Minerals, Agriculture, or any other Mineral, Water, &c. that may be submitted to him, and to give a practical demonstration, verbally or by letter, at the College, of any part of the course.

A scale of fees has been also published, and is to be seen in Great Britain and the United States, and is to be obtained, if sent for, on being forwarded to the publishers, Messrs. G. and J. G. Smith, 15, Old Bailey, London.

For copies of fees and regulations, or for more particulars, apply to the Secretary, or to the Professor, at King's College.
