DAUNTLESS SHINGLE and HEADING MACHINE

CAPACITY FROM 5,000 TO 50,000 PER DAY

F. J. DRAKE, SAW, SHINGLE AND LATH MACHINERY,
Belleville, Ont.

WILL make more Shingles per day than any self-acting machine with vertical saw in existence, and more Shingles from the same quantity of timber.

THE FRAME

Is of iron throughout, very heavy and rigid, strongly bolted and braced.

THE CARRIAGE

Is very light and strong, and made of forged and steel plate, running on steel ways or tracks. Will take in a block 18 inches wide and 9 inches long, adjustable for 16-inch or 18-inch shingles.

(COPY.)

LINSAY, May 18th, 1893

MR F. J. DRAKE, Belleville.

Dear Sir, - The Shingle machine we bought of you over a year ago is doing well. Last year we averaged over 32,000 shingles per day all through the season. We did not lose 15 minutes' time from all stoppages, and all repairs so far have not cost us a cent. We expect to make a still higher average cut this year. All our other machinery purchased from you is as good as the shingle machine. Your ding saw, with friction drive, cannot be beaten. We run ours 180 strokes per minute; with 6 ft. saw it would easily make blocks for two shingle machines. The splitter, with balance wheel 1 foot diameter, weighing 100 lbs., is perfect and runs without the least jar. The iron frame shingle splitter with 10-inch saw is the only good splitter we ever saw. In fact, all your machinery, line shaft, pulleys, etc., gives us the best satisfaction.

We expect to require another mill in a few days, and if we do, will send you the order for complete outfit.

Truly yours, M. DORR.

P.S. - If any one wants to see a good working shingle mill send them to me. - M. D.
