

# MARITIME MEDICAL NEWS

A MONTHLY JOURNAL OF  
MEDICINE AND SURGERY.

VOL. IX.

HALIFAX, NOVA SCOTIA, APRIL, 1897.

No. 4.

*"The general resemblance of milk modified by the Peptogenic Milk Powder to the infant's natural supply is a very striking one."*

R. H. CHITTENDEN.

*"The object to be accomplished in the preparation of cow's milk is to make it resemble human milk as much as possible in chemical composition and physical properties.*

*"When properly prepared, the resultant, so-called 'humanised milk' (prepared with Peptogenic Powder), presents the albuminoids in a minutely coagulable and digestible form; has an alkaline reaction; contains the proper proportion of salts, milk sugar, and fat, is not bitter in taste, being but partially peptonised, and in appearance as well as chemical composition resembles human milk."*

LOUIS STARR.
