Government of Brazil on a comprehensive pilot program to counteract the threat to tropical rain forests in that country. We ask the World Bank to prepare such a proposal, in close cooperation with the Commission of the European Communities, which should be presented at the latest at the next Economic Summit. We appeal to the other concerned countries to join us in this effort. Experience gained in this pilot program should immediately be shared with other countries faced with tropical forest destruction. The Tropical Forestry Action Plan must be reformed and strengthened, placing more emphasis on forest conservation and protection of biological diversity. The International Tropical Timber Organization action plan must be enhanced to emphasize sustainable forest management and improve market operations.

67. We are ready to begin negotiations, in the appropriate fora, as expeditiously as possible on a global forest convention or agreement, which is needed to curb deforestation, protect biodiversity, stimulate positive forestry actions, and address threats to the world's forests. The convention or agreement should be completed as soon as possible, but no later than 1992. The work of the IPCC and others should be taken into account.

68. The destruction of ecologically sensitive areas around the world continues at an alarming pace. Loss of temperate and tropical forests, developmental pressures on estuaries, wetlands and coral reefs, and destruction of biological diversity are symptomatic. To reverse this trend, we will expand cooperation to combat desertification; expand projects to conserve biological diversity; protect the Antarctic; and assist developing countries in their environmental efforts. We will work within UNEP and other fora to achieve these objectives, and will participate actively in UNEP's work to protect biodiversity.

69. Efforts to protect the environment do not stop at the water's edge. Serious problems are caused by marine pollution, both in the oceans and in coastal areas. A comprehensive strategy should be developed to address land-based sources of pollution; we are committed to helping in this regard. We will continue our efforts to avoid oil spills, urge the early entry into force of the existing International Maritime Organization (IMO) Convention, and welcome the work of that organization in developing an international oil spills convention. We are concerned about the impact of environmental degradation and unregulated fishing practices on living marine resources. We support cooperation in the conservation of living marine resources and recognize the importance of regional fisheries organizations in this respect. We call on all concerned countries to respect the conservation regimes.

70. To cope with energy-related environmental damage, priority must be given to improvements in energy efficiency and to the development of alternative energy sources. For the countries that make such a choice, nuclear energy will continue to be an important
