The price of biochemistry is somewhat higher than in the past week. The price of biophysics is somewhat higher than in the past week. The price of biomathematics is somewhat higher than in the past week.

Have You Grain To Harvest?

THEN you will be interested in harvesting machines—the certain, sure, dependable kind. You will be interested in securing a binder which will do the work evenly, quickly and with the least possible strain upon man, team, and machine. In short, you will want a Deering binder.

Being constructed so largely of steel, it combines great strength and durability with lightness. Considering its adaptability to all kinds of land and to every grain crop, it is withal an exceedingly simple machine, being easy to handle and keep in order.

Perhaps the strongest feature of the Deering is its capacity to cleanly gather the grain. The many and delicate adjustments of the reel make it possible to gather up tangled grain almost as well as standing grain. Deering binders are made to cut 5, 6, 7 or 8 feet wide. The wide-cut machine is specially adapted to the use of the large grain grower. Its capacity is remarkable. Capacity in a binder, by the way, is most valuable quality in the busy, all too short, harvest time. We have only space to touch upon a few of the Deering's good points. Very intending purchaser of a binder should secure the Deering book and study the machine. The Deering line of harvesting machines is complete and includes, besides grain and corn harvesting machines, binders, mowers, mowers-spreaders, side delivery rakes, hay loaders, and a complete line of tillage implements and seeding machines, comprising all the modern and efficient cultivators and seeders, smoothing, spring-tooth and disk harrows, and rollers and scufflers. Also gasoline engines, cream separators, hay presses, wagon, sleds, and many other appliances with him the qualities and advantages of Deering harvesting machines. Any of the following branch houses will supply you with the Deering catalog and study the machine.

INTERNATIONAL HARVESTER COMPANY OF AMERICA, CHICAGO, U. S. A.

Power Spramotor

SPRAYS 250 TREES PER HOUR.
16 to 30 nozzles with 125 lb. pressure. Automatic, compensating single or double speed. Strains in the nozzle, and fills its own tank in 10 minutes. Patented nozzle that sprays all parts of the tree from the base to the top. Power motor can be used for spraying 200 to 250 trees per hour.

An unlimited guarantee against breakage or failure. Tell us your needs. You will get expert advice.

SPRAMOTOR CO., BUFFALO, N. Y., LONDON, CANADA.

TWO HEAVY GRADES ON "PUSHER" ROUTE OF G. T. PACIFIC

Ottawa, April 16.—The senate adopted Senator Davis's resolution in favor of provincial railways today. There was only one vote against the resolution. Senator Senator Ferguson was told by Mr. Scott in the senate that the National Transcontinental commissioners had recommended the government to acquire the back route from Grand Falls to Chipman. The length of the route from Grand Falls to Chipman is 200 miles and the back route "pusher" grade had a length of 194.27 miles.

The route between Grand Falls and Chipman, for a distance of 12.4 miles had a grade of 1.1 per cent adverse to west bound traffic, for the remainder of the distance the maximum grade was 1.0 per cent adverse to east bound traffic and east bound traffic was 4 per cent and against west bound traffic 6 per cent.

On the section between Quebec bridge and the New Brunswick boundary there was a stretch of 9.9 miles with a grade of 1.1 per cent adverse to east bound traffic, the remainder having a maximum of 1.0 per cent against west bound traffic and 6 per cent against west bound traffic.

Want Prohibition in Vermont.
St. Johnsbury, Vt., April 18.—Resolutions condemning the operation of the Vermont liquor license law and demanding that the next legislature cause a prohibitory law to be submitted to the people for approval or disapproval were introduced today's session of the Vermont Methodist Episcopal conference.

Nova Scotia school trustee, Captain Campbell, called from Antigonish for Moncton on April 5 with molasses.

LATCHFORD FIRE DID \$100,000 DAMAGE

(Special to The Telegraph.)
Cobalt, Ont., April 18.—Latchford town between 12:30 and 1:30, on T. and N. Railway, was swept by fire yesterday, and the damage will aggregate \$100,000. The fire started in a restaurant in one of the business blocks in which are situated all the largest firms and smaller boarding houses. It began about 4 o'clock and three hours later the whole block was in flames, consisting of two hardware stores, lawyers' offices, lunch counters, two restaurants and boarding houses, butcher shop and tailor shop.

A special train was sent down from Cobalt with a fire engine and other appliances. The large number of prospectors in the place fought the fire valiantly but the block was totally destroyed. The homes, one has been distributed in Cobalt, Halleybury and New Liskeard.

BUTCHERY.
When a butcher moves he pulls up steaks.—Chicago News.

ONLY ONE QUALITY THE VERY BEST

ARE SOLD BY LEADING MERCHANTS EVERYWHERE

These Are Facts It Pays To Remember When You Buy a Manure Spreader.

F. I. H. C. SPREADERS—Corn King and Cloverleaf—one lever control every part of the machine. They are made of cold-rolled steel. Front axle is attached to frame by means of ball and socket joint. Chain drive, direct from rear axle to cylinder. The wheels are steel with staggered spokes. Both rear wheels are fitted with lugs, affording ample traction in wet or frozen fields. Seed is hung so it can be turned forward and kept clean while loading. Apron drive chain is automatically thrown out of gear when load is fed out and again when apron has returned. Range of feed is three to thirty tons per acre with ten speeds. Ends of aprons slats are protected so that manure can work and bind and clamp on the apron.

These are the main points, and they are sufficient to indicate the superiority of the F. I. H. C. line. They tell you not to buy a spreader until you have seen the Corn King and Cloverleaf Spreaders. The key-note in the F. I. H. C. line is strength and simplicity of construction. Strength in every part means much, for a manure spreader has hard work to do. Simple construction means that it will have light draft and be easily overhauled. Those are the things you want in a manure spreader.

F. I. H. C. Spreaders are made in two styles, Cloverleaf, an Endless Apron machine, and Corn King, a Return Apron machine, each in three sizes. Call on our local agent or write nearest branch house for catalogue.

INTERNATIONAL HARVESTER COMPANY OF AMERICA, CHICAGO, U. S. A.

FOR SALE

FOR SALE-Pure bred improved large white Yorks from some of the best herds in Canada. Address Alfred E. Elph, Central Island, 47-48 West street, St. John, N. B.
