SAWS GUMMED while you wait "SONG OF THE ROAD."

How Engine Drivers Find Their Bea ings in Fog.

During a deputation to the Presider of the British Board of Trade, state

of the British Board of Trade, statements were made attributing recent railway accidents to engine drivers having "lost their way" in the fog.

The theory is tenable, as all drivers and guards who have learned "the song of the road" will admit.

"When I was a guard." said Mr. Richard Bell, M. P., "I could sit in my van with my eyes shut and tell where the train was at any moment. Working one section continuously, one gets to learn, the rhythmic song of the road and how it varies at each signal-box, station, curve, gradient, tunnel and bridge."

The sixth sense, which is more than mere hearing, is of the utmost value

The sixth sense, which is more than mere hearing, is of the utmost value to a driver during fog. Denied the use of his eyes, he still does not "lose his way" when he is on a familiar road. But, and here is one of the grievances of railway men which Mr. Geraid Balfour was asked to remove, when a drivers is put on to a new section he is often not allowed to "learn the road" properly. He is put on to stoke for a few days with a driver who knows the road.

road.

"We contend that a driver cannot learn a new road when he is stoking, which should occupy all his time," said Mr. Bell. "He should always be allowed to travel as third man on the footplate, unfettered by work, and in two or three days, by keeping his eyes and ears open, he would learn the road."

CANADIAN'S DISCOVERY.

South American Lady Asks Britain to Prevent Act of Daring Scientists-Would Destroy World.

Would Destroy World.

Perhaps the strangest appeal that has ever found its way into the office of The London Dally Mail is the letter printed below. It seems that a daring astronomer in Argentina wishes to change the orbit of the earth, and as the Government of the country shows no inclination to interfere with his plans, the ingenuous correspondent, whose letter is appended, calls for British intervention to avert a catastrophe. The following is the text of the letter as received:

To the Editor the The Dally Mail, London:

don:

Buenos Aires, Dec. 18, 1904.

Sir.—I have no doubt this letter will cause great stupor in England, where it will find all the attention that it deserves. A review of Buenos Aires was publishing a fiction by Mr. Adolfo Enrique Antognini, which was in brief, the following:

the following:
"Some astronomers, seeing the poor "Some astronomers, seeing the poor progress of astronomic science, due to the great distance that separates the nearest heavenly bodies from the earth, which renders null all the improvements that can be made on telescopie apparatus, determine—taking advantage of the discovery of a Canadian who is a member of the company—to diverse a member of the company-to divert the earth from its normal path, with the purpose of exploring the heavens

as far as possible."

This work would have nothing of particular interest had it not been accompanied by a really wonderful rumor, which is that the project of removing the earth from its orbit is a true one, the so-called fiction being but a manner of preparing the people's minds to the thing.

the thing.

The learned English people can imagine what would be the consequences of such a thing. In the opinion of well-known astronomers, a little deviation of the earth from its regular orbit would be fatal to humanity; if it be removed within its orbit it

gular orbit would be fatal to humanity:
If it be removed within its orbit it
would precipitate into the sun; and if
without it, it would attract the planet
Mars or be attracted by Jupiter, with
results that everyone can imagine.
As it is an affair that concerns the
whole world, I am sure that the English Government, after being made
aware of this, will hasten an energetic
intervention to prevent a sure disaster,
as the Argentine authorities seem so
indifferent about a thing of so much
importance. For, however great for
humanity the value of a better knowledge of Mars or Venus may be, it appears to me that, to put without their pears to me that, to put, without their ent, the human family under danger of complete destruction is too mucl audactive on the part of these men, for whose degenerate and insatiable curi-osity the whole world does not saffice, would dare to oppose God's will. It would be shameful if the end of the earth and its inhabitants should be earth and its inhabitants should be due to the recklessness of some crazy

fellows.

Those who wish to obtain more inferlows.

Those who wish to obtain more information can do so from No. 890 Almirante Brown Street, where Mr. Antognini and his companions hold their councils against human well-being.

I hope that my call to the English people will be successful, and that with the help of your important publication it may save humanity from an immeasureable peril. I am, sir, your most obedient servant,

dient servant,

Chinamen in Toronto.

Chinamen in Toronto.

Toronto has a Chinese population of about 800. More than two-thirds of that number are under instruction in the Chinese Sunday Schools of the Presbyterian and Methodist Churches. In the Sunday School at Cóoke's Church the attendance runs as high as 160, and in the other eleven schools from 20 to 60. Nine of the twelve Sunday Schools are Prestyterian, the rest Methodist. The Chinamen show an eagerness to learn, and, as some of the Sunday Schools meet in the morning, some in the the afternoon, and others at night, many of the scholars attendance than one place. Regular attendance than one place. Regular attendance in the standard schools are placed that the morning some than one place. Regular attendance than one place. some in the the afternoon, and others at night, many of the scholars attend more than one place. Regular attendance and remarkable progress are reported of not a few. Although no effort is made to hurry the Chinese who may be interested in Christianity to become members of the church, there are, nevertheless, about 25 in full communion with the church. A Christian Endeavor Society, conducted by the Chinese themselves, meets in Cooke's Church every Sunday evening from 6 to 7 o'clock. The attendance varies from 40 to 50. The men who attend are mostly those who have made considerable progress in a knowledge of the Christian faith. Every Monday evening a class meets in Knox Church schoolroom, where, in addition to English, other subjects are introduced which are calculated to widen the outlook of the Chinamen. Occasional socials are held, at which the progress in articulation of English is quite manifest.

A Claver Toronto Civil

A Clever Toronto Girl. A Clever Toronto Giri.

A young Toronto verse-writer, Miss Josephine Potter Davis, aged 16, of 67 Pembroke Street, won the prize given by St. Nicholas for the best verses entered in competition for the March number. The verses, under the title, "The Song of the Heroes of Greece," are distinctly meritorious:

We are the heroes of Greece—
We, the immortal dead.
We sit with the gods on Olympus,
With dew and ambrosia fed.
We stormed the heights of Troy,.
We sought for the Golden Fleece—
We, the immortal dead—
We, the heroes of Greece!

We have salled over unknown seas,
And defled the seasons and times,
To the far Hesperides,
To the shores of the northern climes
We have lived life gloriously,
And for us it shall never cease—
For us, the immortal dead—
For us, the heroes of Greece!

The pure blood in the sire is the cadiest means at hand for the farmer o improve all classes of farm animals.

POURS DRUGS INTO LUNG S

real Consumption Cure Originated by German Dector—Digest of Mis Recent Lecture on the Subject.

Professor Jacob, first physician of the Hospital Charitie of Berlin, lec-tured a few days ago before the Ber-lin Society of Internal Medicine on a In Society of Internal Medicine on a new mode of treatment of consump-tion of the lungs originated by him. Professor Jacob started with the presumption that the remedies usual-ly employed do not reach the lo-cation of the disease at all; and he therefore conceived the idea of in-troducing medicaments directly into the lungs. Through anymans

troducing medicaments directly into the lungs. Through numerous experiments on animals he became convinced that such injections are very well borne by animals. The manipulation is very simple and can be undertaken by every physician who is familiar with the use of the throat mirror (Kehlkopfspiegel). After the trachea and larynx have been made insensible by cocaine or anaesthesia, a thin rubber tube is introduced into the lungs, and the medicine is injected through it. The whole process lasts hardly ten minutes.

Professor Jacob has found that the most efficient remedy is the well-

Professor Jacob has found that the most efficient remedy is the well-known tuberculin which Professor Koch used thirteen years ago; next in efficiency is creosote. He succeeded in this way in making the tuberculosis bacilli disappear completely in from four to eight weeks. So far he has treated only five patients by this method, though he expects its general adoption. He added that through this new method a safe diagnosis can be made of consumption of nosis can be made of consumption of the lungs, while this has so far not the lungs, while this has so far not been possible. Heretofore tuberculing was injected hypodermically to demonstrate whether a person suffered from tuberculosis; yet if the reaction was positive, nothing was known about the seat of the tuberculosis. Now only his new method of 'lung infusion,' as he calls it, needs to be employed to determine whether tuberculosis of the lungs with the search of the search of the search of the search of the lungs with the search of the search of the lungs with the search of the sear berculosis of the lungs exists. It is reported that the lecture was receiv-ed with great applause.

THE BOHEMIAN TWINS.

Put the Case of the Siamese Twins Com-pletely in the Background.

Great interest is being taken in the Bohemian twins, Misses Josefa and Rosa Blayek, who have come to this Rosa Blayek, who have come to this country for exhibition purposes: They are rather below the medium height, are 28 years old, and have pale, intelligent faces, fine bright eyes, and a wealth of fair hair. Being unable to stand the London fogs, they are at present in Brighton, where on Friday at the Hippodrome they were examined at a private reception by about a hundred medical men, headed by Sir Joseph Ewart. The doctors express themselves as men, headed by Sir Joseph The doctors express themselves amazed at the extraordinary joi amazed at the extraordinary joi of the bodies, which puts the famous

THE BOREMIAN TWINS.

case of the Siamese twins altogether in the background. The upper parts of their bodies are quite separate, the joining being at the hips, where it is at such an angle that they have never been able to look into each other's eyes. It also involves such a large body area that the death of one must inevitably mean the death of the other, as no operation to sever them could successfully be performed. Each of the young ladies, however, has the full use of her legs. The twins are not only quite normal in mind, but exceedingly well educated. They talk cheerfully, and are very fond of reading and music, one sister often playing the violin while the other is engaged in sewing or embroidery—Lloyd's Weekly, London. of the Siamese twins altogethe

How Much Should We Eat?

One of the much discussed questions of the day on which there are almost as many opinions as individuals is the quantity of food one should eat. The most reasonable estimate yet made is probably that which fixes one-twentieth of the average weight of the body as the average daily quantity required. If you weigh 140 pounts, you should consume seven pounts of food. This includes drink as well as solid food. But it is ridiculous to set down a hard and fost rule. Such a quantity might kill some, and there is a case on record of a man wasting away on a diet of seven or eight pounds of food a day, the cut down his diet to three-quarters of a pound of liquid and the same of solid food, and as a result he grew stout and lived to a ripe old age.

Dynamo Run by a Windmill.

Dyname Run by a Windmill.

At Aikoo, in Denmark, a dyname has been connected to a wind motor and 450 incandescent lamps run very effectively. Difficulties as to the steadiness of such power have been overcome by an ingenious American larmer in Kansas, who has installed a water motor or turbine, run from the tank of his large windmill and connected to a dynamo, thus obtaining lights for his residence and buildings. Wind motors and dynamos were carried on a recent Polar expedition for the same purpose,

We Will Buy

A 50c. Bottle of Liquozone and Give it to You to Try.

We Paid \$100,000

For the American rights to Liquozone. We did this after testing the product for two years, through physisians and hospitals, after proving, in thousands of different eases, that Liquozone destroys the cause of any germ disease.

Liquozone has, for more than 20 years, been the constant subject of scientific and chemical research. It is not made by compounding drugs, nor with alcohol. Its virtues are derived solely from gas—largely oxygen gas—by a process requiring immense apparatus and 14 days' time. The result is a Liquid that does what oxygen does. It is a nerve food and blood food—the most helpful thing in the world to you.

Climate and Politica.

Sarcastic.

A North Carolina lawyer was trying a case before a jury, being counsel for

the prisoner, a man charged with mak-

ng "mountain dew." The judge was very hard on him, and the jury brought

To render the food complete the sick must be fed as children are-that is, with foods that are easily and quickly digested and aborbed, for the digestive organs are always weak. Eggs therefore are among the most valuable of foods for this pur-

The Island of Pearls. The Venezuelan island of Margarita,

very hard on him, and the jury brought in a verdict of guilty. The lawyer moved for a new trial. The judge denied the motion and remarked, "The court and the jury think the prisoner a knave and a fool." After a moment's silence the lawyer answered: "The prisoner wishes me to say that he is perfectly satisfied. He has been tried by a court and a jury of his peers." whose name is the Latin word for whose name is the Latin word for pearl, and whose gems were fought over by the early Spanish explorers, is an inferesting spot. About 2,000 men find constant employment in this business, which has its thrilling moments, since the opening of a shell dredged from the nearl overter banks. from the pearl oyster banks may dis close a jewel of great price. The Margaritan pearls are of fine quality, usually white or yellow, with an occasional black one, and such a one is greeted with joy, for it bears a high value. About \$600,000 worth of pearls are found near Margarita every year.

> The Last Chapter. She shook her head. "No," she said sadly, but firmly, "I cannot trust you." With a groap of despair, he sprang to his feet.

his feet.

"Goodby forever!" he muttered. "I'll bet I can find a landlady that will. I don't have to board here, you know!"

In another minute he had gone, carrying his trunk with him.

Old Age Pensions in Australia. Advocates of old age pensions will be interested in a return which has been published by the Treasurer of the State of Victoria showing the experience of his Government of the system of pensions inaugurated in 1901.

In 1901 the maximum rate of pension was fixed at 1802, week which were

was fixed at 10s a week, which granted to everybody who could make good claim to it. After twelve months' experience the rate was fixed at 8s a week, and the children of pensioners were compelled, if at all able, to contribute towards the pension granted. Reviewing the three years' experience, the Victorian Government finds that, whereas, in 1901, it had to pay 16,275 pensions, on June 30, 1904, when administration was restricted, and the good claim to it. After twelve months rate generally reduced, only 11,609 peomum at 10s a week, worked out at 7s 5½d per pensioner. The present average rate with the 8s maximum is 6s 8d

per pensioner. Some idea of the closeness with which the financial standing which the financial standing of pensioners' relatives is examined will be gathered from the fact that whereas only £19 2s was recovered from relatives within the first three months in the financial year, ending June, 1904, no less than £3,495 was so recovered. The Victorian Government now pays away to pensioners about £200,000 a year, at an administrative cost to the state of only £17,000.

An Unwilling Chesterfield

It was a crowded tram car. Amongst nose who could not find seats was a oung lady. Close to where she stood young lady. Close to where she stood an old man was sitting. He struggled as if to rise. The young woman cast a glance of scorn at one or two men hiding behind newspapers. "Please don't get up," she said to the old man. "Isbeg you won't." The conductor rang the bell and the car went on. The old man's features worked completively. the bell and the car went on. The old man's features worked convulsively, and he mopped his face with his hand-kerchief. At the next stopping place he again tried to else and again the young woman tried to stop him. "I would much rather stand," she said, continuing to block his way. "I don't care whether you would, or not." said the old man, crimson with fury, "I want to get out. You've made me come helf to get out. You've made me come helf to get out. You've made me come half a mile too far already. Here, you, stop the car." But it was too late, the bell had already run, and he had

The business man likes to meet people he can trust; but he much prefers those who pay cash.
