SMUT KILLS GRAIN, FORMALDEHYDE KILLS SMUT IN WHEAT AND OATS

Formaldehyde is recommended by government farms and agricultural colleges. It is the most effective method of treating seed grain so as to prevent smut or rust. At Eaton prices formaldehyde costs less than ever before, so that you can insure a high grade crop at very light expense.

Eaton's  Formaldehyde is Guaranteed Standard Quality. Full Strength, 40 Per Cent. Pure.

PRICES

1 pound bottles, each	...	\$0.25
5 pound jars, each90
10 pound jars, each	1.65
50 pound jars, each	8.00
Per barrel containing 400 pounds,		\$52.00

No extra charge for containers. Full directions for use sent with each package.

These prices on formaldehyde of guaranteed strength and quality are the lowest we have ever been able to quote. Our price has been reduced in consequence of a very large purchase made possible by the heavy sale of our formaldehyde last season. The above prices are lower than those quoted in our Spring and Summer Catalogue, but customers ordering from the Catalogue will receive a rebate of the difference.

Orders should be placed at once, as the demand for  guaranteed Formaldehyde increases enormously each year.

SMUT

and its attack upon grain

This drawing illustrates the appearance of a smutted grain before and after being cut across—It is shown to be completely filled with a fine black powder—many hundreds of thousands of smut spores—which become attached to sound grains and carry over the disease to another year. Smut spores attach themselves readily to the brush end of the grain and in the crease, but owing to their minute size may frequently be present without being noticed.

Formaldehyde coming in contact with smut spores causes them to dry up and wither and finally die without injuring the wheat.
