

Standard Double Truck Car Equipped with Four 100 H.P. Westinghouse Single Phase Railway Motors. The above car is one of the equipment in regular service on the Interworks Railway Trafford City-Wilmerding, Pa.

The Westinghouse Single Phase Railway System

Is no experiment, but
an accomplished fact

Ten roads are now in course of construction, the cars being equipped with a total of 218 Motors, representing 15,435 H.P.

The system has many advantages, two of them are:

1. High trolley voltages are allowable. This means saving in copper and power.
2. The transforming points contain no machinery with moving parts, rendering constant attendance unnecessary.
