

THE MARITIME MEDICAL NEWS.

A MONTHLY JOURNAL OF
MEDICINE AND SURGERY.

VOL. 7.

HALIFAX, NOVA SCOTIA, AUGUST, 1898.

No. 8.

Cows' Milk prepared with FAIRCHILD'S PEPTOGENIC POWDER becomes remarkably like mothers' milk in all particulars—in physical properties, in color and taste, and in the percentage of nutritive constituents; in its digestibility, its behavior with acid, with rennet, and in the infant's stomach.

Milk prepared with the PEPTOGENIC POWDER has simply the normal digestibility of mothers' milk—is not too easily or unnaturally digestible, and contains no aid to digestion. It affords a complete substitute for mothers' milk during the entire nursing period.
