The Girl Child.

Course we'd figured on a boy child, same as people always does.

Baby girls is jest th' uselessest they is or

Eaby girls is jest th' uselessest they is or ever was;

Helpless when they're kids an' helpless when they're middle aged or old, Ail th' fambly turns pertecter fr th' ewe lamb in th' fold.

Dassent ever pop th' question even though she's lost in love;

Has to set an' wait till some one labels 'er his turtledove.

Yit it wan't a boy, by gracious, when it come th' other day!

But we've kind o' got a notion that we'll keep it anyway.

Course 'twas dretful disapp'intin' that she

Course 'twas dretful disapp'intin' that she couldn't been a boy,
An' th' tears we shed—er swallered—wan't no sparklin' tears o' joy;
Billi, she's small an' mighty dawncey, an' she cuddles up so sweet,
With 'er fists like velvet rosebuds an' her teenty, wrinkled feet,
Clingin' clost, jest like th' tendrils of th' mornin' glory vine
As it elambers up th' perch posts en a piece o' cotton twine.
She do'no' but what she's welcome as th' flowers is in May;
So we've somehow got th' notion that we'll keep 'er anyway.

Then ag'in I thought o' mother-she was

Then ag'in I thought o' mother—she was onct a baby girl.
An't no tellin' jest which eyester is th' one that holds th' pearl.
Whe could tell when she was little that she'd grow to be so great
An' would make my dear old daddy such a stiddy runnin' mate?
Then th' one that lays an' snuggles with that bran' new baby hyer—
Vould my life be worth th' livin' if it hadn't been fer her?
She was jest as pink an' helpless as this new one is one day;
so it's middlin' easy guessin' that we'll keep 'er anyway.
—Strickland W. Gillilan in Reader.

Sell Father. Thomas Ryan, in the course of an amusing address to a gathering of Acton cabmen in Acton priory schools, central hall, told an anecdote of a costermonger who, after hard drinking, signed the pledge and prospered.
"The first money he saved from knocking off the bottle he spent in get-

ting his hair cut. This kind of extravagance went on till they'd saved enough to buy a 'moke.' Oh, she was a daisy. Jinny they called her, and they kept her in the parlor downstairs—yes, that's the fact—while they lived over-head. The kids just doted on Jinny. But one morning when they came downstairs Jinny was gone. They asked their mother about her.

" 'Jinny's sold.' she said sorrowfully. Your father's broke the pledge and is drinking again!

"'But, mother,' cried the kids, 'Jinny didn't do it. Why don't you sell father?"-London Daily Mail.

His Point of View.

Has Him Cinched. "I'll bet that couple are married. What'll you bet?"

"I'll bet so too. When he left the car just then he said 'Goodby!' to her, and she kept right on looking out of the window."-Detroit Free Press.

A LUSTARD POULTICE.

It Made a Lot of Trouble and Didn't

Lord Carrington used to be a great practical joker, but he was once the victim of his own reputation. According to the Dundee Advertiser, he was at a hotel in Cape Town. In the same hotel were a young couple, and, the husband having a bad cold, the wife left her room to obtain for him the solace of a mustard poultice. She left him asleep and, thinking she knew her way, descended the stairs and, procur-ing a particularly virulent concection, made her way back to her room. But doors are much alike in hotels, and, seeing one ajar, as she had left her own, she entered. Creeping quietly to the bedside, she saw, as she thought, the form of her sleeping lord and mas-ter. Hastily bending over him, she placed the fatal irritant upon his chest. No sooner had she done so than a movement of the sleeper revealed, to her horror, that she had made a terrible mistake. Too frightened to recapture the incriminating poultice, she field from the room and, rushing down the massage, discovered her own door and passagé, discovered her own door and bolted herself in. It was but a min-ute, and the storm broke. The hotel was in an uproar. The mustard poultice had been placed on the chest of the elderly governor general! The ex-plosion of his wrath, his howls of rage as the mustard did its work, brought servants and manager to his bedside. The situation did not permit of an explanation. Furious with indignation, he declared himself the victim of a gross joke, and the efforts of the maitre d'hotel to pacify him were in vain. He swore that the practical joker was nobody else than Lord Carrington, and he next day, fuming and indignant, left the place. So did a very contrite young wife and a husband whose cold

Overcrowded Street Cars.

Overcrowded Street Cars.

Toronto, Jan. 26.—As a result of the city's application yesterday to the municipal and railway board Wednesday, 30th inst., was set for filing a reply, and Monday, Feb. 4, at 2 p.m., for hearing evidence on the overcrowding of Toronto street cars. Chairman Leitch announced that under the act the sheriff would have to supply a courtroom in the city hall, with all the paraphernalia of a high court, for the board, and that counsel must be properly attired. Corporation counsel denounced the overcrowding as flagrant and indecent.

POWER PRESIDENT'S PROPHECY OF CHEAPER POWER.

Maj.-Gen. F. V. Greene of Buffalo Speaks Eloquently of Canada's Rapid Rise In Wealth, Population and National Importance-Public Demand the Cheapest Possible Power and Preservation of Falls.

"It is not alone in manufactures that cheap power will prove advantageous, but also in lighting, possibly in heating, and certainly in many domestic uses, not alone in the great cities, but in the villages and on the farms. I believe the day is not far distant when practically every house in Ontario within 200 miles of the Niagara River will be lighted by electricity supplied by the power of the great cataract. It will be running the sewing machines, the churns, the ice-cream freezers, the ventilating fans, the house pump, ventilating fans, the house pump, the knife-cleaner and sharpener, the dish-washing machine, the clothes-wringer and other parts of the laundry, and a host of other domestic utensils not yet invented, but much thought about at the present time by a multitude of inventors."—Gen. Greene of Buffalo to Toronto Empire Club.

Maj.-Gen. Francis V. Greene of Buffalo, a man of national reputation in the United States as an author, military expert, and public official, addressed a large attendance of the members of the Empire Club of Toronto at luncheon the other day on the subject of Niagara power. Gen. Greene is pect of Niagara power. Gen. Greene is president of the Niagara Construction Co. and of the Ontario & Niagara Power Co., and as such his remarks in regard to the necessity and importance of obtaining for the people of this province in the cheapest possible manner a supply of power from Niagara have authoritative weight.

The first portion of Gen. Greene's

The first portion of Gen. Greene's address was devoted to a thoughtful discussion of the objects of the Em-

pire Club and the probable future of Canada and its relations to Great Britain and the United States. International Relations. "It behooves my countrymen," said the speaker, "to study these problems with some care and decide what is to be their attitude toward their neigh-

bor on the north, destined so soon to bor on the north, destined so soon to be the equal in wealth and popula-tion of a great nation. I think the attitude of the United States towards Canada has, in the past, not been wise. There was a time 20 years ago when by the exercise of proper tact we might have secured the Canadian market almost as completely as our own market. As matters stand now, Canada has no favors to ask of anyone, either on this side of the Atlantic or on the other. As to Great Britain, it has been said that British sovereignty in Canada exists only so long as it is not exercised, and, while perhaps, in view of the loyal feeling now existing throughout Canada toward your mother country, you might heaitate to acknowledge the truth of such a statement, yet I think that in any matter which brings the question to a practical test you will find this statement not far wrong.

Determine Our Own Future. market almost as completely as our

Determine Our Own Future.

"Just what your future is to be, whether it is to be in a consolidation of the British Empire, or in absolute independence as a great nation, or in some alliance with your powerful and still growing neighbor to the south, I do not undertake to say; but of this I am absolutely certain, and that is, that your future will be determined by yourselves; that you have reached the position where you are absolute masters of your own destiny. As you work it out and as you grow greater year by year I think we, in the United States, will have the same feeling of respect and admiration for you that one strong, self-reliant, self-respecting respect and admiration for you that one strong, self-reliant, self-respecting man has for another; that your growth, although politically and commercially independent of us; cannot but be ad-Sirs,—I have used your MINARD'S LINIMENT for the past 25 years, and whilst I have occasionally used other liniments, I can safely say that I have never used any equal for your's.

If rubbed between the hand of the residue of the tariffs which now and probably for a long time will divide us your growth must lead to a large trade with us, and that with the constantly increasing facilities for communication and intercourse there will be a constantly increasing intimated the constantly increasing facilities for communication and intercourse there will be a constantly increasing facilities for communication and intercourse there will be advantaged to the constantly increasing facilities for communication and intercourse there will be advantaged to the constantly increasing facilities for communication and intercourse there will be a constantly increasing facilities for communication and intercourse there will be a constantly increasing facilities for communication and intercourse there will be a constantly increasing facilities for communication and intercourse the constantly increasing facilities for

Niagara Power Possibilities. Turning to the question of Niagara ower, he noted that now the street power, he noted that now the street cars of Syracuse on the east and of Toronto on the west were operated by Niagara power, and between these two points, distant 250 miles from each other as the wires run, a variety of industries in the way of light, heat and power were dependent on this

and power were dependent of this mighty force.
On his own side of the river public opinion in regard to Niagara seemed to have crystalized into the cry, "Save the Falls." On the Canadian side the cry seemed to be "Transmit and de-liver the white coal at the lowest pos-sible price." He believed that the solution to these two problems was now being worked out.

Sentiment In the States. "In the United States," the speaker went on, "public sentiment has found expression in the Burton bill adopted in Congress on June 29, 1906, asserting the paramount rights of the Unitring the paramount rights of the United States against the rights of the State of New York and the riparian owners in the waters of the Niagara River will be lighted by electricity supplied by the power of the state of New York and the riparian owners in the waters of the Niagara River will be lighted by electricity supplied by the power of the state of New York and the riparian owners in the waters of the Niagara River will be lighted by electricity supplied by the power of the great cataract. It will be running the seving machines, the churns, the focus reversing machines, the churns, the focus reversing machines, the house pump, the knife-cleaner and sharpener, the dish-washing machine, the clothes-wringer and other parts of the laundry, and a host of other domestic utensils not yet invented, but much thought about at the present time by a multitude of inventors."

west as Duluth, for power purpo without the written permit of the Secretary of War, and forbidding the introduction of electricity from the Canadian side of the Niagara River into the United States without a simias they and their prodecessors have believed them to exist for the last 200 years, and destroys them as completely as if a wall had been built at the river's edge of their property. On the ly as if a wall had been built at the river's edge of their property. On the Canadian side public opinion has found expression in the Beck law, giving to the Ontario Government the right to expropriate by judicial proceedings any or all power-houses, transmission lines, and even, if desired, to expropriate the electric current itself, and appointing a commission to regulate and control the distribution of Niagara power throughout the Province of Ontario.

Two Countries Not Apart. 'In the United States the main object has seemed to be to preserve the Falls, and in Ontario to distribute the power from the Falls; and yet, after all, I do not believe that the twoall, I do not believe that the wo-countries are seriously apart. I be-lieve there is just as much sentiment in Ontario in favor of preserving the Falls, in case they are in any danger, as there is in the United States; but from better knowledge of the facts they do not believe that the Falls are in any danger of injury from any works now in progress or contemplat-ed. In the United States I believe in Canada in favor of distributing the power as cheaply and as widely as possible." there is a sentiment as strong as that

He believed that the United States Congress would adopt the views of the International Waterways Commission, which has made specific recommendations as to the diversion of water, and stated the amount which could not be exceeded without the possibility of injury to the appearance of

Importance to Ontario.

"Of the importance of Niagara power to Ontario," he continued, "there are hardly be any question. It is can hardly be any question. It is important to New York State, but New York is comparatively close to they coalfields and has no duty to pay or coal. Of the importance of power itself there is even less question. It is the fundamental prime mover of self there is even less question. It is the fundamental prime mover of modern civilization. The only sources of it is the san's energy, which has been manifested in the past in the formation of coal and oil is now manifested in the tides and the winds, and in the future will be chiefly utilized in the energy of falling water, thanks to the recently discovered uses of electricity. The use of the energy of falling water is as old as history itself, but until near the beginning of the present century its application was limited to a few hundred wards from the spot where the water yards from the spot where the water fell. Now by converting the hydrau-lic energy into electricity and by put-ting in that electricity an enormous ting in that electricity an enormous pressure or voltage the power can be transmitted at least two hundred miles, to advantage; and if the electrical art, progresses as much in the next ten-years as it has in the lest to years as it has in the last ten years it will be feasible to transmit it 500.

miles. What Cheap Power Will Do:

"To come down somewhat to details in regard to the advantages of this power for Ontario, I need only say that Ontario owns the northern shore of Lake Erie and the western bank of the Niagara River, and that Niagara power can be generated and bank of the Niagara River, and that.
Niagara power can be generated and distributed throughout all that portion of Ontario which lies between Toronto and Windsor at a cost less than power can be produced by steam. To what extent you will use it is for your manufacturers themselves to say. Of course, power is not the only element in the cost of manufacture. Labor, raw material, and transportation are each more important. To believe, than each more important, I believe, than power as elements of cost, but the power is, nevertheless, a very impor-tant element. In ordinary manufactures I believe a saving of, say, one-half in the cost of power means a saving of from 5 per cent. to 15 per cent. in the cost of the finished product; in the electro-chemical industries, such as aluminum, calcium carburundum, sode-ash, nitrobide, carburundum, soda-ash, nitro-genous products, and the reduction of-certain metals, a reduction of one-half-in the price of power means a reduction of possibly 40 per cent/ in the cost of the finished product. Cery tain industries of this last named class require the very cheapest pow-er, and cannot stand the cost of transmitting it. For such industries cial facilities and advantages present in that portion of Ontario be-tween the Welland Canal and the Niagara River, having the benefit of the lake navigation and five lines of trunk railroads, and power at a pricealmost unrivalled for cheapp

What Electricity Will Do. "In other industries, such as agri-cultural implements, boots and shoes, hardware, textile fabrics, steel and iro works, the price of power is a less important factor, and the business can stand the cost of transmission to the stand the cost of transmission to the point where such industries are al-ready developed, as they are at so-many points in Ontario, rather than to stand the cost of pulling up stakes and moving down to the vicinity of the Niagara River.

"It is not alone in manufactures that chean power will prove advers

that cheap power will prove advan-tageous, but also in lighting, possibly in heating, and certainly in many domestic uses, not alone in the great cities, but in the villages and on the farms. I believe the day is not far distant when practically every house in Ontario without 200 miles of the
