The Humber Proposition and The Railway Situation.

An Unprejudiced and Fair Review.

PART III.

THE 1922 HUMBER PROPOSITION

Editor Evening Telegram Dear Sir.—In part II of these notes we discussed the 1921 Humber Proposition, Messrs. Armstrong Whitworth and the pros and cons of guarantee. We know nothing authentic regarding the new Humber proposition, except from the press and rumour, but sufficient data has appear-

ed, to enable the formation of opinion. Last January the 1921 Proposition was shelved, apparently, for two reasons, (1) Because the Reid group already involved in the railway tangle, sought the guarantee, and (2) Because the contingent liability of \$20,-606.000.00 with interest thereon, was considered beyond the Colony's capacity. It appears, however, that Messrs Armstrong Whitworth were so im-

in that it makes possible a mammoth Newsprint mill capable of delivering Newsprint at tide-water at \$40.00 per tractors. We do not know what It is now understood that Messrs. ton, and provides 65,000 surplus powthe consideration is, but rumour Reid in London, demanded settlement er available at 1/5 of a cent or less per K.W. hour.

Among the natural resources of any country, Water Power is Becoming More and More Valuable, because of developments in electric transmission and Electro-metallurgy, particularly when the water power can be converted into useful energy at a very Small Capital Outlay per Unit. The estimated cost of the Humber Power is \$77.00 per H.P., for the first 85,-000; and \$44.00 per H.P. for the next 65.000. This unit cost is well below the average,-(say \$150.00 per H.P.), -and very much below many developments which cost \$200.00 to \$300.00

per H.P. It is not hard to foresee Further Development, when cheap power is available. Messrs. Armstrong-Whitworth already contemplate the Smelting of Aluminum. All geological reports agree, regarding the possibilities of the copper-bearing serpentines of Notre Dame Bay, and the mineralized-formations of the West Coast. Cheap power and the possibility of Electric Smelting may make the development of these areas possible. Railway Electrification is not far outside the bounds of practicability when there is cheap power. According to Mr. Morgan, the new Railway Manager, our railway can never become anything better than a costly toy, while steep gradients exist from end to end of the line. Electrification is the cure for steep gradients, and as an experiment it should be tried from Deer Lake to Bay of Islands. It Druggists sell millions of packages.

So pleasant and so harmless! The moment "Pape's Diapepsin" reaches the stomech all distress goes. Lumps of indigestion, gases, heartburn, sourness, bloating, flatulence, palpitation, vanish.

Ease your stomach now! Correct diagestion and acidity for a few cents. Druggists sell millions of packages.

The moment "Pape's Diapepsin" reaches day night, and the affair was a good at bargain success. The hall was tastefully decorated with flags and paper decorations and showed that considerable trouble was taken. Owing to the lateral party of the lateral party of the state of the story of the lateral party of the state of the story of the lateral party of the Manager, our railway can never be-

the Railway dispute, before the could sell their control of the Humber property. It is said further that the
