Please find attached the ninth edition of a mini database covering selected economic, trade and social statistics. The tables include the statistics most frequently used within the Department when preparing background briefs, ministerial briefings and speeches. The data focus on the G-7 (with special emphasis on Canada and the U.S.). The data are organized in time series on an annual-basis covering at least the last ten years. EET updates the database twice a year - in April and October - as the originating statistical agencies issue more recent and revised information.

2. Divisions should note that each table identifies its sources in a footnote and that the sources are available at the DFAIT library. Divisions requiring answers to day-to-day research questions similar to the information provided in the attached database should consult the library's research staff who are available to provide advice and direction on data sources for statistical projects. It would not be efficient for EET to duplicate basic statistical work for which each Division is responsible. In addition to assisting you in this work through the creation of the attached database, however, EET can and will provide methodological advice to officers from other Divisions if sufficient lead time is given. We would appreciate that you circulate this information to all members of your division. Your cooperation in this regard is appreciated.

3. Extra copies of this document are available through the library and the InfoCentre (SXCI). The mini database is also available in electronic form upon request to J. Berger (EET).

Gail Tyerman
Deputy Director
Trade and Economic Analysis (EET)
