A VOICE FROM THE PENITENTIARY.

MOTHER. Par from my happy home,
And left the land that gave me birth,
in other climes to room;
And marked them on my brow,
Yet still I think on thee mother,
I'm thinking on thee now.

When by thy gentle side, mether,
Thou watched my dawning youth,
And kissed me in your pride, mother,
Taught me the word of truth,
Then brightly was my soul lit up
With thoughts of future joy,
Whilst you bright fancy garlands wove,
To deck thy darling boy.

I'm thinking on the day, mother, When, with such anxious care You lifted up your heart to Heaven, You filed up your near to Heaven,
Your hope, your trust was there.
Fond mem'ry brings the parting glance,
Whilst tear's rolled down my cheek,
That last long loving look told more
Than ever words could speak.

I'm lonely and forsaken, mother No friend is near me now To soothe me with a tender word Or cool my burning brow. The dearest ties affection wove Are all now torn from me, They left me when my trouble came,

I would not have thee know, mother, How brightest hopes decay, The tempter with his beneful cup Has dashed them all away; And shaine has left its venom sting, To rack with anguish wild, Yet still I would not have the know The sorrows of thy child.

I know you would no chide, mother, You would not give me blame,
But soothe me with a terder word
And bid me hope egain.
I'm lonely and forsaken now,
Unpitied and unblest,
Yet still, I would not have thee know

I've wandered far away, mother, Since I deserted thee,
And left thy trusting heart to break
Beyond the deep blue sea;
Yet mother still I love thee well, I long to hear thee speak.

And feel again that belony breath

Upon my careworn cheek.

But ah ! there is a thought, mother, Pervades my beating breast, That thy free'd spirit may have flown

To its eternal rest,
And as I wipe the tear away,
There whispers in my ear
A voice that speaks of Heaven, mother,
And bids me seek thee there,

THE SCIENCE OF BREAD-MAKING .- A correspondent of the Scientific American contributes to that journal the following article on this important topic. It will be

found very interesting to housewives:

I am much pleased that the attention of your correspondents has been lately drawn to that important subject—bread. When science is applied to render society healthier and happier, by lessening the ills of life, she becomes the handmaid of virtue. When she acts in that capacity I rejoice in her progress; but when she is forced by interested men to assume an attitude not in accordance with the true intent and design of the creation, it is the happy privilege of the Scien-tific American and its correspondents to cut think that Saleratus and soda in our bread have more to do with the thin bones, rotten teeth, and flabby looks of our children, large and small, than many would imagine. All he has stated on that point can be sustained by the testimony of the first chemist of our day, Liebig, and also by that of medical men of the first standing, such as Schwencke. Pitcairne and Orfila. They testify that "the carbonate of potash, soda and ammonia have a particular effect in breaking up the coagulating power of the blood, and inducing a diminished vital cohesion of the various textures of the body formed from it." Whe interested parties spread forth to the public the virtues of medicinal saleratus, dyspertic saleratus, &c., bread raised without yeas and nothing left in the bread but pure salt -heed them not. And if medicine men can be found so far behind the times as to testify in favor of the use of alkaline matter in food leave them to be benefitted by their own prescriptions. Good yeast is the best agent t present known to raise bread with, and when the sponge is set, it should be placed in a temperature of about eighty degrees, and when it begins to work, it should be freely exposed to the air so as to allow the carbonic acid gas to escape with facility When fermentation is carried on in a close space and dough covered up, the quality of he bread is liable to be injured, for the more freely the gas is permitted to escape into the atmosphere the better will be the bread. As soon as the fermentation has reached a certain point, which bakers call "light." knead and bake it; the heat of the oven stops fermentation, and over fermentation makes sour bread. A certain degree of heat in the process of baking changes the starch of grain into dextrine, and gives that pe culiar and agreeable flavor which lively well baked bread has. Dead, doughy bread is wanting in flavor, the heat of the oven being too low to develop the dextrine. Dextrine is soluble in water; starch is not.--Thoroughly baked bread is easier of digestion than when it is not well baked. It would be an advantage to bakers to have a little closet attached to the oven, which should be ventilated into the chimney, and have a draft hole at the bottom of the door to regulate the heat and ventilate the interior space. This closet should be used for the reception of the sponge during the pro-cess of fermentation. Its advantages would

of heat would be uniformly maintained. A patent has lately been taken out by C. Couper, of London, for a new and beautiful blue color. It consists of soluble Prussian blue and carmine of indigo mixed together, according to their combining pro-portions. He has found that these two ue coloring substances dissolve one another and combine to form a new blue of definite composition, which possesses the property of being applied to fabrics made of both vegetable and animal substances, either with or without mordants. This blue is a clear lor, and does not vary in artificial or solar

be that the escaped gas would be carried off, and in cold weather the fermenting degree

have been carried out with great success in the province of Constantine, in Algeria; the province of Constantine, in Algeria; 50 wells have been opened since 1856, which yield, altogether, about 13,090,000 gallons in the course of 24 hours. These borings in the course of 24 hours. These borings have been executed with three sets of boring apparatus only, at an expense, exclusive of the cost of the apparatus, of about £110 for each of the 50 wells.

In the course of 24 hours. These borings friends at tea in her master's room. The hospitable domestic was on the point of lighting apparatus only, at an expense, exclusive of the cost of the apparatus, of about £110 the doctor'f notes, when he entered the for each of the 50 wells.

Some of the grand people of Paris have their gardens roofed over with glass, xtensive importations of flowers, into "the of winter paradises," where ive their visitors and give elegant

nice administered, if the poison itself has not already excited free vomiting. Dupuy-tren seems to have acted on this principle, when,on being summoned to the lecture-room of Professor Thenard, who had just drunk off, in mistake, a solution of corrosive sublity of white of egg, nevertheless ordered the stomach-pump to be immediately and freely used, thereby, in all probability, saving the life of his patient.

A red nosed gentleman asked a whit whether he believed in spirits.—"Ay, sir, replied he, looking him full in the face. "I see too much evidence before me to doubt it."

omposed of 95 members, of whom 46 are it's just a weigh he has. physicians; 18 surgeons; 6 accoucheurs;

surgical pathology. PROHIBITION OF TATTOOING .- The dangers of tattooing, so much practiced among seamen, have been pointed out in a recent report of the inspector-general of health of the French marine. The loss of an arm, and even death itself, are shown to have reand even death itself, are shown to have resulted from operations of this nature, while minor accidents from this cause are very numerous. Authority calls on sailors, inviting them to abstain from this dangerous

THE BEARDED LADY .- Under the head of births, deaths, and marriages at Moscow, it is announced in the Russian papers, that Julia, Pastrana, the well known bearded lady, has presented the world with a perpetuation of her species in the shape of a fine boy .-As the new-born prodigy is not a girl, we do not see how the cause of science in this ques-

tion is advanced. MLLE. CLERET'S NEW CURE FOR DEAF-NESS .- The new care for deafness, which has created so much excitement among the physicians of France, has long been well known in this country. It consists in drop-ping sulphuric other into the aural condult. Several physicians in this city and elsewhere have for years employed it either alone or asunder the restraining band and leave fair in combination with glycerine. By the la-Science free to resume her sacred mission. Your correspondent "L. K.," is inclined to opinion was beginning to gain ground that the virtues of this remedy, though great, had

een overrated. DEATH FROM A FISH-BONE PIERCING THE HEART.-A few weeks ago a poor woman was found dead on a door-step in Russell Square, London, and a post-morten ex-amination showed that death had been caused by a fish-bone, one inch aud three quarters long, as sharp as a needle, which had pro-ruded through the stomach and entered the heart. The pericardium and diaphragm, eart, were pierced with eight wounds.

EXPULSION OF A FOREIGN BODY FROM THE NOSE .- A small child having got herry-stone lodged within its nose, and the forts of a regular practitioner having failed, he services of the village barbar, who like wise practiced the healing art, were called in. He administered a powerful emetic, and at the moment when vomiting was about to commence, clapped a handkerchief tightly over the child's mouth. Either from the iolent expulsion of the contents of the stonach against the nares, or from the impulse iven by the air expired, the stone dropped on the floor.

tatistics it appears that in Scotland there ire about 5,000 pauper lunatics. Last year 392 died, and 497 were cured. The proportion of cures exceeds that of last year, and has been improving since 1855.

ANECDOTES OF DOCTORS. A country apothecary, not a little distinuished for his impudence, with a hope of isconcerting a young clergyman, whom he ed him, in the hearing of a large company— "Why the patriarchs of old lived to such an extreme age?" to which the clergyman reolied—"I suppose the ancient patriarchs Beef do took nor physic."
Among the vagaries of Dr Monsey was the

way in which he extracted his own teeth -Round the tooth sentenced to be drawn he fastened securely a strong piece of catgut, to the opposite end of which he affixed a bullet. With this bullet, and a full measure of powder, a pistol was charged. On the trigger being pulled, the operation was performed effectually and speedily. The doctor could only rarely prevail on his friends to permit him to remove their teeth by this original process. Once a gentleman who had agreed to try the novelty, and had even allowed the apparatus to be adjusted, at the last moment exclaimed, "Stop, stop, I've changed my mind!" But I haven't, and you're a fool and a coward for your pains.' inswered the doctor, pulling the trigger. In mother instance the tooth was extracted, such to the timid patient's delight and as tonishment. He preferred investing his money in any wild speculation to confiding it to the safe custody of the funds. Even his ready cash he for a long time could not bring himself to trust in the hands of a banker. When he left town for a trip, he had recourse to the most absurd schemes for the protection of his money. Before setting out, on one occasion, for Norfolk, incredulous with regard to cash boxes and bureaus, he hid a considerable quantity of gold and notes in the fire-place of his study, covering them artistically with cinders and shavings. A month afterward (returning luckily a few old housemaid preparing to entertain a few friends at tea in her master's room. The com, seized on a pail of water that chanced

ed the fire and her presence of mind at the same time. Some of the notes, as it was, were injured, ann the bank made objections to cashing them. they receive their visitors and give elegant little fetes champetres, to the great admiration of those who are invited and the equalwriting a letter at a coffee-house, he found writing a letter at a curious Irishman, A silent wag—the wag of a dog's tail.
