

DEFECTIVE VOWELS, GLIDES, AND DIPHTHONGS.

Precise vowel quality difficult to obtain from deaf children. The reason why this is so. A mirror essential in correcting vowel defects	100-102
German <i>ch</i> forms the keynote to the vowels.....	103

Indefinite murmur of the voice in place of glide <i>r</i>	108-109
Ordinary usage tolerate considerable latitude in the pronunciation of vowels. Consonants, and small-aperture vowels in accented syllables must be accurately given; whereas considerable latitude may be allowed in the pronunciation of medium-aperture, and large-aperture vowels; and of diphthongal sounds wherever they occur	111
Law of combination. Successive positions of the vocal organs do not simply come one after the other like the letters on a printed page, but overlap. A position is retained until the mouth is in position for the next element. Principle of combination illustrated by the syllables <i>bee</i> , <i>dee</i> , and <i>gee</i> . The chief difficulties of articulation teaching lie, not so much with the elementary sounds, as with their combinations into syllables. Thorough comprehension of the law of combination by both teachers and pupils essential	112

CONCLUDING REMARKS UPON ARTICULATION TEACHING.

With hearing persons the elements of speech constitute the final, not the initial, exercises of articulation. Word-method of teaching commended as more natural than the element-method now in use	113-114
Practical difficulties in the way of applying the word-method to the deaf. Suggestions how to overcome them. That method which conforms most nearly to the method whereby hearing children acquire speech most worthy of adoption by teachers of the deaf	114-115

QUESTIONS.

I would like to know if the symbols on your charts represent the elements to which you would reduce all the English words.....	115
I notice that the glide <i>r</i> is omitted. I see in the symbols that an indefinite position of the mouth represents voice glide. Is it the same thing?	115-116
When we give a deaf child the indefinite voice mark in place of glide <i>r</i> , we obtain from him a sound that approximates very closely to the vernacular effect. This plan commended by Miss Yale	116
