

Exp. 3		Exp. 4	
+	Still Moving	-	Still Moving
125	100	125	100
	90		95
	75		75
	75		75
	75		75
	75		75
	75		75
	75		80
	70		75
	70		70

(Signed) Wm. F. Bedwin.

The answer seems to be conclusive. The push of a propeller is different when the machine is advancing than when it is at rest. The push decreases with the speed. A.G.B.
