## JOEL'S PORTABLE MILL

is the wonderful combination of a FLOUR MILL, a CRUSHER, a GRINDER, a CLEANING and a SIFTING MACHINE. REQUIRES BUT 2 TO 4 HORSE POWER.

It forms a complete MILLING PLANT, built on the principles applied in large MODERN MILLS—THE ROLLER SYSTEM.

FOR MAN, it produces all grades of flour, from the coarsest to the finest household flour.

FOR ANIMALS, it produces the best form of foods, viz.—crushed or ground grain, with all its nutritive and fattening qualities.

It is the only Flour Mill, Grinder and Crusher combined, built for CAPACITY AND QUALITY OF PRODUCT, portable or fixed, AT POPULAR PRICES.

QUALITY OF PRODUCT results from its marvelous grain cleaning device and SELF-ADJUSTABLE SIEVE BRUSHES.

CAPACITY AND ECONOMY of operation result from the adaptation of the ROLLER SYSTEM with partly fluted and partly smooth rollers.

THE JOEL MILL is the last and crowning link in the marvelous chain of implements and machinery that make the farmers independent and self sustaining.

THE JOEL MILL IS BUILT TO LAST AND SOLD UNDER A GUARANTEE

### THE DRAFT HORSE

Any breeder who wishes to raise draft horses should always try to raise the best possible. It may require a little more money to purchase one or two good mares for foundation stock, and this applies to all the different breeds, but it goes without saying that the breeder who uses the best foundation stock that it is possible for him to acquire will be a long shot ahead in the end. Having got good foundation stock, the next vital question that faces him is to find the best stamp of a sire to which to breed his mares.

It is just as easy to raise colts from a good pure bred sire as it is to raise the progeny of a scrub. It may possibly cost a few more dollars for service fees, but here again in the end the wise breeder is ahead. Many of the scrubs which we see in this coun-

try are not horses; they are either misfits or monstrosities, and every true lover of the horse, be he a drafter or a trotter, should endeavor to breed as true to type as possible. In the draft horse we want size, coupled with good conformation, just as in the Hackney we look for nice conformation and good action.

Great changes have taken place in the draft horse in recent years. What were considered good drafters twenty years ago would today be designated "farm chunks." The draft horse of today is partly the result of judicious breeding and partly the product of a temperate environment. We do not look for a great deal of action, endurance or activity in the trot of the drafter, what we aim to accomplish is size and strength, the power to draw heavy loads at the walk. Breeders themselves in

their insatiable desire for size, have caused, at times, a certain coarseness of structure, which we sometimes see in heavy horses, upright shoulders, long backs, etc. In the draft horse what we want to see is a good tempered, well coupled active animal, wide in the chest, indicating lots of heart room, legs well set under his body, good broad, big feet, a nice flat flinty bone, not too much hair or feather, as it is sometimes called, a short back and slanting shoulders, so that when his neck goes into the collar, something has got to move.

There is a large amount of skill and good judgment required in the raising of good draft horses, just as much, if not more, than is required in the raising of a good trotting horse. As we mentioned before, we must have the foundation stock, then we must use a

good deal of discretion in order to determine the best kind of sire to breed to, in order to throw the draft class we wish to produce. Of course there are possibly fewer risks to be run in the raising of the drafter than in perhaps any other breed, and to the farmer, this is a more inviting field.

It has been said that the draft horse is wanting in intelligence, but the writer has seen as much, if not more, intelligence in the drafter as in any other breed. One thing to be remembered is that while the drafter may be the progeny of well-bred dams and sires, most of the horses employed by our large cartage firms and corporations are geldings, and while their breeding doubtless influences to a certain extent their value and usefulness, it goes without question that it is on their own individual merits that the gelding rises or falls. But, on the other hand, the farmer who goes in for raising draft horses should always remember that "blood tells." The type of animal to raise good drafters should, as well as having a long pedigree, be of the right stamp individually, and if these points are looked after, there is no fear but what good stock will be the result.

All our breeds of heavy horses were got from European countries, and when we wanted heavy horses we have had to go to Europe for them, but there is no reason why good drafters cannot be raised just as well in this country, and we know quite a number of breeders who are raising good ones, but there is a wide and lucrative field for the breeders who, with good discernment and judgment, go in for raising high class draft horses.

### SOME BOAT

"It must have been dreadful to cross the ocean in a small boat like the May flower."

"I dunno. Judging by the alleged passenger list she had the Lusitania skinned a mile."

### RELIEF

"I have a confession to make. Half my teeth are false."

"That's nothing. I thought they were all false."
