- From the TPES and TFC data non-energy use and use as petrochemical feedstocks have been deducted. For a detailed description of the methodology used to calculate CO₂ emissions see attached Annex 1.
- OECD total TPES = 3 750.56 Mtoe (being 50.6% of world total).
- World TPES = 7 403 Mtoe.
- Tone of oil equivalent per person.
- Tone of oil equivalent per thousand \$ at 1985 prices.
- CO₂ accounts for the largest share of radiative forcing due to increased greenhouse gas emissions, but other important contributors are methane, chlorofluorocarbons and nitrous oxide. All GHGs and both their sources and sinks, must be accounted for in measuring contributions to net GHGs.
- Tone of carbon per person.
- Tone of carbon per thousand \$ at 1985 prices.
- OECD Total CO₂ emissions = 2 792.64 Mt.
- World CO₂ emissions = 5 877.27 Mt Carbon.
