DOME LEADS RISE

McIntyre and Hollinger Other Strong Issues—La Rose Holds Advance.

Decided strength in Dome, McIntyre and Hollinger gave a bullish aspect to the mining market yesterday. Rumors are again in circulation that an impetus

OTISSE PROPERTY WILL BECOME BIG PRODUCER

Half Dozen Other Properties in Matachewan Have Bright Prospects---Ore Likely to Grade Higher Than in Porcupine and to Occur in Greater Volume Than at Kirkland Lake.

Matachewan is a very interesting minng region. Tho as yet only slightly exblored, it looks very promising, and it
is likely to furnish not a few large and
rich mines. There are many igneous itrusions, and many different types of

for yellow copper ore, but when its quality became indisputable at least one of these men trembled like a wind-blown leaf under the acute nervous tension of the moment. Masses of pure metal are not often found in mere surface operations.

not often found in mere surface operations.

Fluorite is of widespread occurrence in the Township of Cairo, according to Mr. Burrows' report. It has a rich purple color, It has, however, not been found in commercial quantities: that is, it cannot be profitably mined as fluorite alone, Mr. Burrows, however, does not deal with fluorite as a mineral associated with gold. But as such it occurs in the two great gold-telluride camps of Kalgoorlie in Western Australia and Cripple Creek, Colorado. Kalgoorlie is famous thruout the whole mining world, and Maclaren says that from 1893 to 1908, Cripple Creek was the leading gold camp in the United States. There fluorite, generally purple in color, is abundant in all veins.

The mineral is also found with tellurides of gold in the Black Hills, S.D.; also at King's Mountain, North Carolina, and in one or two places in Montana. But none of these regions come anywhere near Kalgoorlie or Cripple Creek as telluride fields.

Syenite is a very common rock in

luride fields.

Syenite is a very common rock in Cripple Creek and in the Township of Cairo, Matachewan and the association of fluorite with rich teflurides of gold in Colorado and Australia gives special significance to its occurrence in the Caradian camp. It seems to indicate unusually rich ore.

Appearance of Fluorite.

In this connection it may be mentioned that on the property of the Moyneur Lake syndicate in Cairo we noticed fluorite forming part of the gangue of the precious metal, Its color was wineyellow with specks of red. There was also a dark mineral which we took to be petzite, a telluride of gold and silver The color of non-metallic minerals such as fluorite is, however, not essential, and in other parts of Cairo we saw the purple fluorite described by Mr. Burrows, and in one case observed petzite occurring in a gangue of quartz and fluorite.

Garnets also occur at the contacts of

are again in circulation that an impetus street; can help the worst case of lameness. We warrant an absolute fit. Thirty years' experience orthopedic shoemaking.

Victory Bonds.

ATTENTION! Victory Bonds Bought registered or bearer, Cash paid immediately, Brokers 120 University of the conditions of a few weeks back, minguistics of late is buoyancy of Forcupine stocks of late is buoyancy of Forcupine stocks.

BRING YOUR VICTORY BONDS to Barnes, 1315 St. Clair avenue, if you want the best price.

VICTORY BONDS and all other were the stock, after opening at 9,00, advanced to 1,00, and 1,00, a New York Curb market: According to Adams, the financial expert of the Boston News Bureau, a creeping bull market is considered highly probable. Today's market is apparently in that catagory, as the general list was firm, with fractional advances recorded in several issues. Sub-

a point at one point higher at 6614. Day on the current may be ment, and Teck-Hughes advanced two points to 18.

Beaver was prominent among the Cobalts, selling half a point higher at 28 and predictions are made that the 30 mark will be crossed in a day or two. La Rose held well around 52 only a point below Tuesday's closing, the rapidity of the recent advance not having brought about the flood of realizing sales that might have been expected. McKinley-Darragh was active but sold off a point to 44. New York is reported to be still a buyer of this stock. Nipissing sold again at from 9.10 to 9.00 and the bids for Trethewey advanced half a point to 26. Peterson Lake was steady at 9. The mill is stated to be again in good running condition.

Rockwood Oil rallied strongly, closing Rockwood Oil rallied strongly, closing McKinley-Darragh 43 McIntyre 1.50 Nipissin; 8.75 Nipissin; 8.75 Nipissin; 8.75

is likely to furnish not a tew large and rich mines. There are many ignous intrusions, and many different types of rock, but it is a curious and somewhat significant fact that the sediments of the Cobait series have attained the greatest elevations.

The country, on the whole, is more rugged than Porcupine or any other gold field of northern Ontario. There are some moose, red dear and bear with the sea and ponds, and in places rather wide or any policy, and in places rather wide or any policy and the policy of the sea and policy, and in places rather wide or any policy and the policy of the sea and policy, and in places rather wide or any policy of seathy-folling country frequently broken by considerable hills, tho sand has accumulated on the more level ground. On growth of the sweet fern and young popiar and birth, the latter after-products of fire, which sweet the region a few years ago.

The presence of gold seems to depend the process of the portion of the season of the contract between schilar loop (1) a contact between the porphyry or syenite and the schilar of the knewsting group. He will be supplyed to the process of gold seems to depend any of the supplyed of the season of the centre of which was a pond coverage of the portion of the loop of th

Transportation to the new gold camp has been considerably improved of late. There is now no delay at the Indian chute nor at the end of navigation on the Montreal River. Here a wagon is in waiting to convey all freight and baggage to Fox Rapids. From this point the journey can be continued either by wagon or gasoline launch to Otisse landing.

At Moyneur's Camp, Fox Rapids, excellent meals can be had for 50 cents; in fact, it would be difficult for either lumberjack or epicure to complain of the fare at Moyneur's, and, needless to say, this hostelry is freely patronized by all persons going to the gold fields, Mrs. Moyneur excels in attention to her guests.

Moyneur excels in attention to her guests.

Interest in the new gold camp is increasing rapidly. The Otisse is certain to become a large producer, and there are half a dozen others with very bright prospects. The ore is likely to be of a better grade than that of Porcupine, and we expect it will occur in much greater volume than at Kirkland Lake.

C. B. Flynn of New York, one of the directors of the McIntyre Consolidated, is interested in the Otisse and has lately been at the property for six weeks. Tho the gold there occurs principally in wide bands of gray and green schist, there is also a sulphide vein four feet wide. Mr. Flynn informed us that unoxidized ore from this vein runs over \$40 per ton. The vein is very clear-cut and well-defined.

Matachewan is a highly favored region. Matachewan is a highly favored region.

isignificance to its occurrence in the Canadian camp. It seems to indicate unusually rich ore.

Appearance of Fluorite.

In this connection it may be mentioned that on the property of the Moyneur Lake syndicate in Cairo we noticed fluorite forming part of the gangue of the precious metal. Its color was wineyellow with specks of red. There was also a dark mineral which we took to be petzite, a telluride of gold and sliver. The color of non-metallic minerals such as fluorite is, however, not essential, and in other parts of Cairo we saw the purple fluorite described by Mr. Burrows, and in one case observed petzite occurring in a gangue of quartz and fluorite.

Garnets also occur at the contacts of porphyry and schist in Cairo, They are not of the gem variety, and are of no commercial value. Their presence, how-

CROP SITUATION

Press as follows:

AUGUST FIRE LOSS

The Star of the Gold Stocks Ascending

"We are on the last lap, and near the winning post," states a French writer.

In the resounding hammer strokes of the Allied armies in France, so gloriously successful against the Hun invader, can be detected a prophetic note.

A note of triumph for the Allies which is being heard and appreciated from the highest in the German ranks to the lowest.

The enemy is now realizing that "the jig is up" as far as their schemes of aggression are concerned. The only question that is occupying the minds of authorities now is, will the end come this year or

The effect of the military success gained since midsummer is reflected in the stock markets, where the tone has become more buoyant and the tendency is unmistakably towards higher prices.

The period of anxiety and depression is passing and will soon be but a memory. There is no room now for pessimism and doubt while our doughty warriors are performing epic deeds of valor in France.

The buoyancy in the markets should keep pace with the ebbing tide of German power. The markets have stood up wonderfully well in times of trial and stress. Now that victory is assured there should be no holding back.

The time is now rapidly approaching when the gold mines of the north will be given a new lease of life. Even with conditions such as to cause the gold mines great hardship the record of production and dividends has been remarkably good. When the situation clears and the gold mines can expand as their physical condition warrants it is safe to predict that previous records of production, etc., will be left far behind,

The gold stocks lead in favor among the 'peace" issues, this favoritism already having evidenced itself in a better demand within recent times which is clearly due to the growing conviction that the day of the gold mines is approaching.

Given sufficient labor the gold mines can take care of themselves. The average grade of ore being found in the gold camps of Northern Ontario is such as to return handsome profits in normal times and even with costs at unprecedented levels some of the mines have been

able to operate profitably and make a fair rate of return to shareholders. When conditions improve, and this will take place as the end of the war grows nearer, the people of Canada will be given a revelation of what the gold camps of the north can do. What a showing can be made in Porcupine with the Hollinger, Dome, Mc-Intyre, Porcupine Crown, Davidson, Dome Lake, Vipond-North Thompson and all the other properties

working at full blast! In addition there are Kirkland Lake, Boston Creek, Shiningtree, Matachewan, etc., where the production of gold on a substantial scale is assured upon further development.

When war broke out in 1914 the mining markets were just getting in shape for a boom such as has never been seen in Canada. This was simply the logical result of the steadily increasing activity in the gold fields and the success being met with in the production of the yellow metal. Since then despite adverse conditions great

strides have been made. The great Hollinger consolidation has taken place, the McIntyre consolidation has been effected and the whole tendency of centralization of effort in the camp has borne much fruit. As the clouds of adversity roll away the effects

of greater efficiency, more scientific methods of mining and milling as adopted in the gold mines up north, will become more apparent and the gold stocks will more than justify their favored position in the realm of investment. WE BELIEVE THAT NOW IS THE LOGICAL TIME TO BUY THE GOLD STOCKS. WE GAVE SIMILAR ADVICE SOME MONTHS

AGO. LET US EXAMINE WHAT HAS SINCE OCCURRED. WE ADVISED THE PURCHASE OF HOL LINGER AT \$3.50, IT IS NOW \$5.

WE ADVISED THE PURCHASE OF DOME AT \$6.50, IT IS NOW \$9.75. WE ADVISED THE PURCHASE OF Mc-

INTYRE AT \$1.25, IT IS NOW \$1.50. Isbell, Plant & Co.
