

Do you know what it is? No. Can you pronounce it? Hardly. Its not algebra. We know it well and its name and uses are written down some place on this page. But while we are talking about medicine, **Who's Your Druggist?** To whom do you take the Doctor's prescription when the lives of loved ones are in danger? Not to a cheap place; cheap drugs are the dearest investment you can make. You want the best drugs it is possible to get. Don't you?

### Our Prescription Department

All druggists have one. We give special attention to our prescription department. There is not a vegetable drug, or chemical but what is passed on by our 3 assistants.

### Our Pharmacopoea

The latest book which tells us how to determine the purity of drugs.

### Our Microscope

which aids the eye in determining the identity and purity of drugs.

### Our Test Tubes and Lamp

which enable us through chemical tests to detect impurities which the unaided eye or microscope fails to show.

All our drugs are passed on by these assistants. If the drug is not up to the standard it doesn't go on our shelves.

The doctor wants that kind of drugs and knows he can depend on getting them here. The patient wants them too.

We are not cheap druggists, we are good druggists, the kind you can depend on when the sick ones need our service.

### Patent Medicines

We believe you ought to see your doctor when you are ill. 9 out of 10 times you aggravate the illness by dosing with all sorts of patent nostrums and finally a wiser and a sicker man you get your doctor and so be cured. We sell them but never recommend, and at bargain prices too.

### Our New Branch Store

Will be opened by May 15th at the summer resort Balmy Beach near Munroe Park and if you are ever overcome by the heat remember your life may be saved by a glass of our cold soda.

Full line of drugs, sundries and cigars. Remember the address and watch for us Cor. Beach Ave. and Queen St. E.
