

Canadian Inventor's Cartridge-Shaped Unsinkable Lifeboat

The Fisher lifeboat, invented by Mr. John Fisher, of Toronto, which is being built there, will be tested as soon as the ice breaks up on Lake Ontario. There is a cylinder within the boat, and it is claimed that even if the boat is upset, the inner cylinder, with the people in it, would remain right side up. There is room for plenty of water and provisions and machinery to propel the craft.

THE BENEFITS OF A MILITARY TRAINING

Colonel Hughes Says It Helps in the Upbuilding of Manhood.

Ottawa, March 17.—Hon. Col. Hughes, minister of militia, apparently proposes to link up the militia department to the Women's Christian Temperance Union and other laudable agencies for moral reform.

The minister has issued a special communication to Parliament, setting forth the "relative cost of criminal statistics and liquor and tobacco on the one hand and the cost of the militia force for Canada on the other." He points out that there are two classes of training in Canada: "The positive and the negative, the upbuilding and the demoralizing." In the former the minister classes schools, churches and the militia, in the order named, and in the latter crime and the intemperate use of liquor and tobacco.

Proceeding, Col. Hughes points out that there was a total of 89,962 convictions in Canada during the year 1900, and that the total cost of the administration of justice is \$4.57 per head of the population, while the militia and defence only costs \$1.15 per head. "The former cost," says the minister, "does not include shame, humiliation, disgrace, broken hearts, and wrecked homes and lives." The average duty paid on liquor and tobacco consumed in Canada is \$1.50 per head of population, while the total net cost of liquor and tobacco consumed in Canada, the figures for which the minister states he secured from the Women's Christian Temperance Union, was \$55,292,257 for the year. He points out that the average cost per head of the negative forces instilled is \$18.20, while that of militia and defence is only \$1.15. "The minister points out that the militia 'upbuilds' manhood, defends homes and loved ones, supplies teachers and instructors all over Canada for cadet corps, Boy Scouts, physical training, training school teachers, schools of military instruction, at times for police, and physically, instills a spirit of obedience, discipline, patriotism, veneration and love for principle, the spirit of liberty and independence, and keeps the old flag flying to the breeze, and trains the boys to be an asset of the nation."

LATE ROBERT TAIT

Well-Known Former London Traveller Was Buried at Ottawa.

The funeral of Mr. Robert Tait, who died suddenly at Victoria, B. C., on March 7, took place at his home, 421 Nelson street, Ottawa, on Saturday morning, March 16, interment being made at Beechwood Cemetery. Rev. James Little, of St. Paul's Presbyterian Church, conducted the services.

Previous to taking up the management of the Ottawa branch of the McCormick Manufacturing Company, about four years ago, Mr. Tait had travelled out of London for the same firm through Western Ontario for 30 years, being well known as "Bob" on the road.

Mr. Tait went out to his brother, Leonard, in Victoria, about four months ago, hoping to improve his health, and news of his death came as a great shock to the family.

He leaves a widow and seven children—three sons, Leonard, of London, and Howard and Albert, at home; and four daughters, Mrs. W. Wilson, of Edmonton; Bertha, Margaret, and Ruth, at home. He also leaves two brothers and one sister in Victoria, and two sisters, Mary and Maggie Stewart, Hamilton, Ont.

Mr. Tait was born at Puslinch, Ont., in 1851.

Many beautiful floral expressions of sympathy were sent, among them being a broken circle "Bob" from the London travellers; a grip from the Commercial Travellers' Association; London, wreaths from the McCormick Manufacturing Company, London, also their Ottawa branch; D. C. McNaughton, London, and others.

WATER SUPPLY WAS CUT OFF INTAKE PIPE CLOGGED BY ICE

Sarnia Citizens Are Greatly Agitated Over Discoveries Made By Diver, and a Full Investigation May Be Demanded—Official Report of Chief Medical Health Officer.

[Special to The Advertiser.]

Sarnia, March 16.—The greatest indignation prevails among local people over the fact that for three hours today the water supply was shut off as a result of the intake pipe being clogged with paper, ice, weeds, and refuse of various kinds. Coming so soon after the recent terrible typhoid epidemic, which cost so many lives, the affair promises to cause an agitation that will result seriously for any parties found to be responsible for the condition of affairs that was discovered when the services of a diver were obtained, and the intake opened. It was fully three hours before the mass could be cleared away, and the water supply placed in commission again, and now the problem that many are facing is "What are we drinking?" The affair has caused a widespread discussion.

Chairman Mackenzie, of the board of health, admitted to an Advertiser representative that undesirable things were found among the mass that was clogging the intake pipe. The chairman was present when the diver made his report. He did not wish to discuss the matter.

Seen later, and pressed for a statement, Mr. Mackenzie said: "I have thought the matter over, and have decided it is best to say nothing about the affair. Enough publicity has been given the town before in cases of this kind by the outside press, and it hurts the place. The council will surely take the thing in at once, that is, the council or the people."

It was reported that Dr. Morrison and Mr. Doherty (both members of the health board) were at the scene when the intake was examined, and that the latter (Mr. Doherty) wanted to fill the supply well with water pumped from the Imperial Oil Company's well, and that this was objected to by Chairman Mackenzie, on the grounds that the water is not fit for drinking purposes, coming as it does from a point above which several sewers discharge their contents.

Don't Want to Talk.

The chairman was asked if he did not consider Dr. Morrison's suggestion unwise. Mr. Mackenzie replied: "The less said about that the better."

Provincial Detective Action says he saw some of the refuse that was taken from the intake, and that filthy paper, and a thin strip of cloth, apparently a piece of carpet or mattress, was among the mass.

The opinion of citizens here appears to be that those in whose behalf the recent typhoid epidemic was to be sufficient warning that too great pains cannot be taken to guard the people from dangerous sources of infection. If the intake pipe had been in its normal condition, it is likely that no trouble would have occurred, but just now it is in the hands of Contractor McCullough for repairs, and the middle section having been removed, the water supply is taken into the pipe about three or four hundred feet from shore, instead of seven hundred, thus placing the intake where it will catch the refuse from Sarnia Bay, and possibly from Point Edward.

The new public health bill, passed by the Government, the provisions of which adequately cope with conditions such as prevail in Sarnia, will prove invaluable in the future in dealing with municipal affairs of this nature.

Official Report.

That the town of Sarnia has been afflicted with an almost continuous epidemic of typhoid fever for eleven years, accompanied by a death rate from the disease four to five times greater than in other cities, and a cost to the town of over two hundred thousand dollars, is revealed in the report of Dr. H. W. S. McCullough, chief health officer of Sarnia, who conducted a special investigation last January into a particularly serious outbreak of the disease.

The investigation consumed two days, and fifty witnesses were examined. The evidence showed that the contaminated water supply was the sole cause of the epidemic. This contamination has taken place, according to reports made to Dr. McCullough at various times since 1901, due partly to the sewage from the mills north of the water intake and from Point Edward, a village where the water supply, it was shown, also suffered from the sewage from steamboats passing up and down the river.

Abnormal Death Rate.

Since 1901, when there were 24 cases of typhoid in Sarnia, there has on three occasions only been less than 40 cases of the disease in one year. The death rate has been abnormally large. In the years 1900 to 1911 inclusive the records of the registrar-general's department show an average of 9 yearly, a total of 86 deaths. For 1911 the death rate was on the basis of 140 per 100,000 population, which would mean that Sarnia, with a population of 650 a year. The report points out that the town of Sarnia, which takes its water supply from Lake Huron, a distance of fourteen miles, had but one death from typhoid in eleven years.

Excited given at the investigation by divers showed that the Sarnia intake pipe had been covered with sand, and that a whole section had dropped out.

New Water Supply Needed.

"The danger from contamination of supply, even if the intake were intact, is absolutely certain that the present source of supply should be abandoned," says Dr. McCullough, in suggesting that Sarnia should take steps to secure its water supply from Lake Huron and not from the river.

Dr. McCullough's report makes it clear that the town of Sarnia would have made a good investment in a proper water system years ago. Figuring out the cost to the town of the many cases and deaths in eleven years, he reaches a total of \$200,412, or an average yearly loss of \$18,219. He points out that this amount represents 4 per cent on a capital of nearly half a million.

The report shows that the chlorination plant installed after the epidemic was reported to the Provincial Health Department was of great value in checking the spread of the epidemic, only one case being reported in the last week of February, and no deaths during that month.

FROM WEDDING PARTY TO ELECTRIC CHAIR

Brutal Murderer Fought to the Last To Prevent His Execution.

[Canadian Press.]

Auburn, N. Y., March 15.—From a wedding party to the electric chair tells the story of Domenico Di Pasquale, who died in the electric chair this morning, exactly one year after his conviction. To the last he fought against death in the chair, and a statement issued by the deputy warden after the execution told of his effort to hang himself in his cell early Friday morning. He had made a cord of strands of bedding, shoe-strings and light twine that he had obtained from articles necessary to his confinement, and after making a noose attached to a ventilator, had settled down. He was discovered, cut down, and revived, and was closely guarded until this morning.

When the final summons came, he at first refused to leave the condemned room, but when shoved by two guards stepped into the chamber and walked to the chair alone.

When the current was sent through his body, the words of Electrician Davis, he proved to be a "high resistance man," requiring 1,375 volts at eight amperes. Two contacts were necessary, and in eight minutes he was pronounced dead.

Domenico Di Pasquale shot Cologero Polizzi during a quarrel at a wedding celebration in Rochester on Nov. 15, 1910, according to the testimony. At the time of the shooting the evidence showed that Pasquale had a razor uplifted in his right hand, and that the shooting must have been done with a revolver in his left.
