EDISON'S LIGHT IN USE. Results in New York City and Out

From the New York Post. work of the Edison Electric light company in the down-town district has est ceased to be an experiment; the amps have burned steadily, night and day whenever wanted, since Sept. 4. The manufacturers of fixtures are overtaxed in supplying the demand, or the introduction of the lamps would go on faster: as it is, about one hundred lamps a day are added to the system, and enough are in operation at points further away from the central station points further away from the central station to prove that the conductors are perfect, and that no difficulty need be feared even on longer circuits. From the Pearl efreet station to the banking house of Brexel, Morgan & Co., at Broad and Wall streets is about half a mile, and is the longest distance over which the current is sent in this district. The only complaints received come from persons who having seen the arc lights in the streets imagined that the Edison light would be something of that kind, and are disappointed at finding it of about the same power as a good gas burner. The interes are going in as fast as the inspector of the board of fire underwriters passes upon the "wiring" of the buildings, and are found to work well. The upper floors of the central station in Pearl street are heing fitted up as offices for the business of the district. An ingenious arrangement for detecting serious differ need in the amount of light given has been introduced. When the state business to strong, owing to a large light given has been introduced. When the night becomes too strong, owing to a large

number of lamps being suddenly extinguished, a lamp painted red lights up automatically and a bell begins to ring. When the light becomes too week a blue lamp lights up and the bell rings, and continues to ring until some more currents are turned on. By the first of next January the company hopes to have all its lights burning and the business settled on as firm a footing as that of the gas companies.

Catarrh—A New Mode of Treatment.

From the Weekly (Toronto) Mail, Aug. 24.

Perhaps the most extraordinary success that has been achieved in modern medicine has been attained.

and other advertised cures never record a cure at all. Starting with the claim now generally believed by the most scientific men that the disease is due to the presence of living parisites in the tissue, Mr. Dixon at once adapted his cure to their extermination—this accomplished, he claims the catarrh is tioned, as acures effected by him two years ago are cures still. No one else has ever attempted to cure catarrh in this manner, and no other treatment has ever cured catarrh. The application of the reinedy is simple and can be done at home, and the present season of the year is the most favorable for a speedy and permanent cure, the majority of cases being cured at one treatment. Sufferers should correspond with Mr. A. H. Dixon, 305 and 307 King street west, Toronto, Canada, and enclose stamp for his treatises, on catarrh. UNDERTAKING
