
BARAVENA MILK FOOD.

FOR INFANTS AND YOUNG CHILDREN.

Physicians who have recommended it and mothers who have used it for the past four years say, the results are as good and even better than from high-priced foreign foods of similar nature.

It is an absolutely pure compound preparation of specially prepared farina of Wheat and Barley in which the starch has been converted in Dextrine, combined with pure milk and sugar, so that when mixed with water, as directed, for feeding the child, it contains all the casein, sugar, butter and other mammalian constituents nearest in QUALITY and QUANTITY to MOTHER'S MILK of any food made.

The analysis of Dr. Edwards and Dr. Ellis, ordered by the Government, is highly satisfactory. For fuller particulars, testimonials, analysis, etc., address
