

How to Cheat in Grain.

The bottom of a grain sack is filled with good wheat. A length of stove pipe is inserted in the centre of the sack and filled with the rejected wheat. The sack is then filled around the stove pipe with good wheat and the pipe withdrawn, and on top of this is put good wheat. In this manner a neat "plug" of rejected wheat 7 inches in diameter and 2 feet in length is inserted in the center of each sack, and is so surrounded by good wheat that it is almost impossible to detect it when dumped into the hopper, especially if the contents of a sack which has not been "plugged" is immediately dumped on top of the contraband wheat. It is said to be a scheme which will circumvent the most eagle eyed elevator man.

WATER POWER.

THE Mayor and Council of the Town of Minnedosa, Manitoba, invite correspondence from parties willing to undertake the construction of a Dam and working of Water Power on the Little Saskatchewan River. On the basis of a Report and Plan prepared by Geo. H. Webster, Esq., C.E., Chief Engineer of the Manitoba & Northwestern Railway Company.

Mr. Webster's report provides for a Reservoir or Power Canal, 600 feet long, 150 to 200 feet wide, and of a minimum depth of 13 feet, with four good mill sites adjacent thereto, and states that there is every opportunity for the utilization of a splendid Water Power, estimating that the revenue derived at the low rental of \$10 per horse power from the 400 horse power to be provided will probably repay the whole outlay in three or four years.

The Report and Plan may be examined at the office of

ERNEST W. PEARSON,
Clerk and Treasurer.
