

Because, in a general way, they are so busy looking after patients they grow careless, and are amenable to exhausting disease conditions. They refuse to take their own prescriptions and prefer not to advise other doctors. They are given to slow suicide through personal neglect. They break all hygienic laws. Few breathe or exercise correctly, for instance.

Recall the grippe of '90 and '91; history shows a second visitation follows one like that of this year, and it is a question whether the broiling heat of July helped destroy latent germs or through enervating people, made conditions more favorable. Now is the time to increase reserve strength and health while the cool fall days are here and winter coughs and rheumatic aches are avoidable. A large number of physicians have found the assimilable oil an invaluable addition to the medical and general dietetic treatment of grippe and pneumonia attacks, as well as in tuberculosis.

Increasing quantities of Scott's Emulsion are prescribed annually because it is an honest, reliable preparation. We do not hesitate to say there is no cod-liver oil emulsion that is comparable with it. Not one drop of alcohol, and 50 per cent. finest Norwegian oil in Scott's. Every drop is assimilable. If you will take it regularly a few weeks and note how much stronger and better you feel in every way, you will then have even better testimony than your patients can give you, and you will be more likely to stand up under a season's hard work. Everybody knows Scott's Emulsion invigorates.

DIATRIBES FALLEN FLAT.

The literature on American antipyretics, analgesics and anodynes is voluminous, and clinical reports from prominent medical men in all parts of this country, with society proceedings and editorial references, attest their value in actual practice in an endless variety of diseases and symptomatic affections, such as the neuralgias, rheumatism, typhoid and other fevers, headaches, influenza and particularly in the pains due to irregularities of menstruation. Antikamnia has received more favorable criticism because of its success than any other remedy known. Some critics have seemed personally aggrieved because of its American source, and that it did not emanate from the usual "color works," but their diatribes have fallen flat as do most persecutions and unreasonable and petty prejudices. The fact stands incontrovertible that antikamnia has proven an excellent and reliable remedy, and when a physician is satisfied with the effects achieved with a remedy he usually holds fast to it. That is the secret of the antikamnia success. The dose is from one to two-grain tablets. Antikamnia tablets are to-day in greater use than any other remedy of their kind.
