

SOUTH ELEVATION, COLLEGIATE INSTITUTE, WINDSOR, ONT.

underneath the auditorium. These shops are underneath the auditorium so that the noise of the workshops will not disturb the other classrooms. The bench room is equipped with twenty-four individual benches and three carpenter benches, and is provided with six speed lathes and a band saw, all separately motor driven. Individual motors are also used to operate the equipment in the mill room, which includes a surfacer, a jointer and a boring machine, as well as two forges, while in the sheet metal and plumbing room modern tools and appliances are available for instructions in these two particular trades.

Spacious corridors and separate entrances at the front, sides and rear enable the students to enter or leave the building without the slightest semblance of crowding or disorder. Arranged along the corridors, which are 16 feet wide, are a system of metal lockers built directly into

the wall, thereby eliminating any projection and contributing to the general appearance of neatness.

The laboratories for physics, chemistry and senior biology are located on the second floor,

COLLEGIATE INSTITUTE, WINDSOR, ONT.
