

hand out an instruction book at the beginning of a season and let the individual shift for himself. Inspection and supervision must be continuous and close to bring the best results out of any body of men whether in a foundry or a forest.

"The problem of Ontario's forests surely demands prompt and intelligent treatment. Two thousand wood-using industries depend upon living forests for their raw materials. The power value of scores of streams has been badly affected by the burning of tree growth on watersheds. It would seem far more practical and sensible, even as a war measure, to guard the foundations of industry and water powers from needless racking by fire, than to spend time and money on some of the more superficial concerns of the people. One-third of a cent per acre has been demonstrated by the Quebec limit-holders' associations as sufficient to cover the cost of forest guarding. This includes the build-

ing of permanent equipment, such as telephone lines, lookout towers, rangers' cabins, and other essentials, of which Ontario has very little. If real protection of magnificent spruce and pine can be obtained for a third of a cent per acre, the losses resignedly borne by Ontario year by year would seem absolutely inexcusable."

### TREES, SHRUBS AND SEEDS

Hardy Northern Trees and Shrubs at Forest Prices. Native and Foreign Tree Seeds

## YALE UNIVERSITY FOREST SCHOOL

NEW HAVEN, CONNECTICUT, U.S.A.

YALE University Forest School is a graduate department of Yale University. It is the oldest existing forest school in the United States and exceeds any other in the number of its alumni. A general two-year course leading to the degree of Master of Forestry is offered to graduates of universities, colleges and scientific institutions of high standing, and, under exceptional conditions, to men who have had three years of collegiate training including certain prescribed subjects. Men who are not candidates for the degree may enter the school as special students, for work in any of the subjects offered in the regular course, by submitting evidence that will warrant their taking the work to their own advantage and that of the School. Those who have completed a general course in forestry are admitted for research and advanced work in Dendrology, Silviculture, Forest Management, Forest Technology and Lumbering. The regular two-year course begins the first week in July at the School camp, Milford, Pennsylvania.
