Heat your home the most efficient,  
healthful and economical way with a

# McClary's Sunshine Furnace

The warm air system of heating is most efficient, because it is most direct. Warm air cannot readily enter a room while it is filled with cold air. To attempt to heat a room without, at the same time, removing cold air already in the room, is working under a big handicap. Yet that is just what happens where hot water or steam systems are in use, and it is this very factor that accounts for their high cost of operation.

A McClary's Sunshine Furnace draws the cold air from the rooms down the cold air pipes, and replaces it with warm, fresh air in equal quantity.

Heating your home with a McClary's Sunshine Furnace is the most healthful way, because special provision is made for properly moistening the air before distribution to the various rooms and halls. The pure, fresh air is drawn into the heating chamber, rapidly heated and poured into the distributing pipes, passing over the water pan on its way.

As to economy, the first cost is very low, being less than half that of a warm water system and less than a third that of steam. The cost of installation is much less also, and, furthermore, each year of operation means a big saving in fuel bills. McClary's Sunshine Furnace is easily the most economical heating system from any point of view.

**Get Competent Advice—FREE** We have saved money for thousands of house owners, and are at your service in the same way.

We maintain a staff of heating engineers to advise upon heating problems. Send rough plans and size of your house, and let our experts figure out for you the size of furnace required, location, heat distribution and other details of the best arrangement for your particular needs. This service is entirely free, whether you purchase or not, and will undoubtedly save you considerable expense.

It's worth your while to know all about the Sunshine Furnace.
