NOTICES OF THE PRESS:

"It requires only a glance at the work to perceive that there is here one of the most important of modern contributions to the science of Palæontological Botany."—*Geological Magazine. London, Eng.*

"The economic geology of the region is kept well to the fore, also its physical geography and agricultural characteristics as dependent on its geological structure. Many subjects of great interest in general geology, are illustrated or described in this volume especially the nature of coal, the flora of the coal, preservation of erect trees, origin of gypsum, life in seas, estuaries, &c., trails, rain-marks, and footprints, albertite, gold, primate man, &c. Upwards of 270 woodcuts, mostly excellent in character, a good geological map, and lastly, several lists of contents, special subjects and illustrations, a valuable appendix, and useful index complete this satisfactory, well-written and well-printed work, on the geology and geological resources of Acadia."—*Annals and Magazine of Natural History. London, Eng.*

"The general reader will find many pages of pleasant and lucid description, amplified from the former work, while the political economist will obtain from it a full description of the mineral resources of the Acadian Provinces and statistics of their development during the last decade."—*New York Evening Post.*

"It is altogether a work of which the Colony may very justly be proud, for it is not merely a valuable digest of the geology and palæontology of Acadia, but an important contribution to the literature of these sciences."—*Pall Mall Gazette. London.*
