AGRICULTURE

Notes and Suggestions of Practical Utility

FOR THE FARM, FIELD, GARDEN AND DAIRY.

Cleanings of Interest for Our Country Readers.

Wide doors are best. Use flat strips of soap.

Produce to suit the market. As you sow, so shall you reap.

Experiment a little every year. There is disease in a dirty hide.

Good feed improves every breed. Keep the barnyard dry and clean.

The silo may produce half the feed. Scavill is the basis of partitioning.

Breed is of little avail without feed. Good bedding is better than carding.

A rich barnyard means poor farming. Grass when dried makes the best hay.

Crowd your work of it will crowd you. Fatten old sheep in the season of grass.

Cut out all useless flocks in the cornhill. A good profit is a convincing argument.

Poor farming and poverty go together. A rich barnyard means poor farming.

Keep the flock of sheep dry at all times. The good may be perverted to evil uses.

Fifty fowls are enough to experiment on. Regularity is a prime element in feeding.

Sheep keep makes uneven fibre of wool. Give the cows a little dry feed in summer.

Send us your best thoughts for publication. Shallow cultivation is as good as a shower.

Some machinery costs more than it saves. Complements should be fed sparingly, if at all.

Keep the pigs of the same age in the same pen. Individual loss is so much lost from the herd.

The better the government the fewer the laws. Every shearer demands good care of the flock.

A free range is natural to all living creatures. Avoid having to buy more than you have to sell.

Gravel, sand and mud, is what poultry needs. It is natural for sheep to roam over a pasture.

We all want the best, but how can we have it? Variety is related by animals as well as by men.

If the soil is there, it can be made productive. The hand work unites with the poetry on the farm.

'Isn't the talk about wild tines growing rampant. Pay as you go is the key to perennial profit.

Brighten the private dairymen, not destroy his cow. Dry earth should be used freely in a manure cellar.

A bright thought is more valuable than a diamond. Smaller farms better tilled would be profitable.

The loss top soil acts as a mulch in a dry time. All kinds of stock need looking after and caring for.

The rising generation is full of new mysteries. Cranks are necessary to turn the wheels of progress.

Five good cows will feed a better than ten half-fed. A good soil must be properly prepared as well as rich.

It is hard to break away from old habits and prejudices. The strength of the moment is often the defeat of years.

It is easier to get at the selling than at the cost price. It costs no more to keep the best than to keep the worst.

A good pasture should have water running through it. Quality counts, but there must be sufficient of it to pay.

It is important to have for sale what the market calls for. The price of food has much to do with profitable feeding.

Laying hens must have a due share of nutritious food. The simplest tools are usually the most effective and useful.

There is no danger of the ewe getting too fat after lambing. A tool kept in order requires but little attention at one time.

The highest education is that which makes the best citizen. Provide good shade for your sheep as well as other stock.

Much of the progress of the age is only a repetition of the old. The great need of the times is practical and intelligent teachers.

We waste a great deal of time in reading to get little knowledge. The farmer must have average crops to keep even with the world.

Clean food and clean quarters make clean eggs, milk and meat. Mr. J. McCormack, Maguway, N. B., writes:—Dr. Williams' Pink Pills cured me of dyspepsia after doctors had failed. They are a grand remedy.

Of all dealers or by mail at 50 a box or six boxes for \$2.50. Dr. Williams' Med. Co., Brockville, Ont., and Schenectady, N. Y. Beware of imitations.

PARAGRAPHS

On All Subjects of Current Note at Home and Abroad.

Clipped and Condensed for the Readers of The Globe.

Japan women load vessels. Year from her mother can conductors.

There are 4,500 women printers in England. Mrs. Marsh of Chicago is an undertaker.

Many southern women plant and ship peanuts. Three hundred women are florists in the United States.

Mrs. Kimball of West Virginia is president of a railroad. There are 38,000 women in England enrolled in trades unions.

In Massachusetts 133 women are employed in making cartridges. In 1845 Miss Sarah P. Maher invented the first submarine telescope.

Phoebe Cousins acted as sheriff of St. Louis after her father's death. Queen Marguerite of Italy claims to have the sandals worn by the Emperor Nero.

Miss Pullman receives a salary \$1,000 a year from her father for naming the Pullman place cars. SHEPHERD'S NEWS.

Shepherd's News shows up in Selectman Fowler's report of his investigation into baby farming reveals the residence of five baby farms in Hartford, West Hartford and Bloomfield, where the children from other towns and outside the state have been placed by Mrs. Virginia F. Smith, the missionary of the city mission, and other charitable institutions in this city.

At one farm in this city twenty-three children were placed by Mrs. Smith from February to June. The women running 'farms' claim that they were ignorant of the law. No record of cases has been kept. They are mostly illegitimate children. Mrs. Smith paid \$2 per week for each child for its board and her son, Dr. O. C. Smith a city physician attended the children when ill.

It is said some of the infants have been adopted by persons paying \$13 to \$40 each to Mrs. Smith. The alleged 'farms' have been run in the interest of Mrs. Smith, who has received young girls from various parts of this state and Massachusetts, placed them there during confinement, received her pay from the girls or their seducers and placed the babies. The practice has prevailed about eight years. The report says a member of Mrs. Smith's family attempted to bribe a reporter of a city paper to suppress certain facts he had unearthed. The affair created a big sensation in Hartford which has become notorious as a city where the results of vice could be recovered up through the offices of the city missionary in the name of charity.

THE DAIRY. A Cheap Butter Cooler. London Dairy quotes from Work a description of a simple cooler for butter, as follows:—"It cost practically nothing—a great consideration in these struggling days. It is perfectly equal to any refrigerator. It is simple, and capable of being cleaned easily; it is based upon sound scientific and hygienic principles. To make it, get an ordinary flower-pot (enamel, of course) and a saucer, and a glazed plate or dish. These are all that are necessary. Thoroughly clean the flower pot inside and out, and dry it in a current of air, or the sun; then soak it well in cold water. Place the butter upon the inverted saucer; the saucer in the dish which you must fill with cold water, taking care that the water is not high enough to reach over the top of the saucer; and then place the flower pot over the saucer, and your cooler is made. It will keep your butter hard in the hottest weather; the hole at the top will allow the free access of air, and the porous sides of the pot will hold the water, and yet permit the air to penetrate through. This kind of cooler has been tried during a severe run of hot weather, and has been found to act beautifully."

Deal Gently with the Cow. It used to be, "Deal gently with the ewe," but we now have another application of the same sentiment in, "Deal gently with the cow." As an illustration, it is related that on a large farm where the cows were milked night and morning by several different milkers, during the absence one day of one of the milkers, an Irishman, the cows he generally milked gave half only of their ordinary yield. The one who milked them was considered one of the best milkers, but the cows would not "give down." While the milking was going on the next morning the man who had been away returned just as one of his best milkers had refused to give more than half her usual quantity. He said: "Is it Diney that's going back on her record? Let me take the pail." Sitting down, he said, "Host me Jewel," and commenced to sing. "If I had a cow that gave much milk, I'd have her in the finest milk."

The cow looked around at the first sound of Pat's voice, and with a dreamy, contented look in her expressive eyes commenced to chew her cud and "give down" the milk, and Pat soon had the usual amount.

A Cure For Dyspepsia. Mr. J. McCormack, Maguway, N. B., writes:—"Dr. Williams' Pink Pills cured me of dyspepsia after doctors had failed. They are a grand remedy." Of all dealers or by mail at 50 a box or six boxes for \$2.50. Dr. Williams' Med. Co., Brockville, Ont., and Schenectady, N. Y. Beware of imitations.

JINGLES OF HUMOR.

A Little Humorous Gath'ring for Leisure Reading.

In a Connecticut school recently a teacher was trying to impress a youngster with the meaning of the word 'better.' To illustrate she asked, 'Now, if you were sick and a doctor came and gave you some medicine, what would you be?'

'Dead,' was the unexpected answer. 'Now, Johnnie, think everything you have is better than anybody else's.'

'What you feed beyond the maintenance ration is what goes into the grain.' There is a bundle of nonsense to a grain of sense written about the dairy.

Treat your wife as your equal and give her as good a chance as you have. Cabbage sprouts grown in the cellar make an excellent dish of your year's best milk.

Strive to get so you can pay as you go. It will pay to pinch a little to do it. Too many people think more of present indulgence than of future success.

Animals breathe through the skin as well as through the lungs; keep the pores. Every thing ought to be done with a view to promoting the best interests of the whole.

Green found must be supplied when poultry is confined. So must nitrogenous material. What is the use of trying to reason with a fool? "Oat straw above ground must die."

It is asserted that when the owl is heard to hoot it will rain within twenty-four hours. The quality of the product depends on the quality of the material from which it is made.

One article of food may be sufficient for a meal, but at such times you may want something else. By paying too much attention to detail, one often loses the beauty of the general expression.

Too good crops are counted as national disasters. They make the farmer too independent. Mixed pasture grasses are best for all animals in the absence of those, feed a variety of food.

A man may receive the freedom of a city in a box, but a dog enjoys the freedom of his nose. The trouble in making agricultural improvement is the setting upon new fields of experience and investigation.

Any wood cut back and not allowed to grow will above ground must die. "Wherever you see a head hit it."

The need of the country is not a few learned men, but the education of the mass up to the highest practical level.

A variety of food is more digestible as well as more agreeable, but it does not pay to cost everything at one meal.

The modern agricultural curriculum is modeled on the old curriculum. The old stage coach was modeled after the old stage coach.
