

SCHOOL TELEPHONES

Made in Canada

Principal's Telephone

The principal's telephone is known as the Master Station, and consists of a standard desk telephone connected to a separate ringing board by a green silk covered cord. The ringing board has push buttons set in the face for ringing purposes. Opposite to each push button is a name plate, which designates the room that particular button will reach.

Class Room Telephone

The class room telephones are well made and beautifully finished in dark oak. They are just the right size for school rooms. In the face of each telephone is set a push button which is used for ringing the principal's telephone. They are the best school telephones in existence, and will last as long as the schoolhouse. We have these types in Toronto schools.

SIGNAL BELLS

Every school needs one or more signal bells for calling or dismissing classes, or for the announcing of recess. They are also used for ringing fire alarm signals. We have these school bells in finely finished steel for inside use, and in rugged weatherproof types for the outside. We can furnish them in all sizes and for any voltage.

OUR RURAL TELEPHONES

are giving satisfactory service all over Canada and are famous for the simplicity of their ringing and talking features. They are built to last, are finely finished and are without doubt the best rural telephones in use in this or any other country.
