

Double Strength— But Only a Moderate Increase in Cost

Farm Gates— Large, Unbreakable Frames

THIS new Frost Gate has a pipe frame ONE-THIRD LARGER than the ordinary pipe framed gate. It is just the thing you've wanted for years for those places where a gate gets extremely rough usage. Cannot be equalled for lanes, barnyards, etc.

Every farmer knows the excellence of "FROST" Gates: how they have always been first with all the Improvements. We were first to sell continuous steel tubing frames; electrically welded; then the Galvanized finished frames, and now all these improvements combined with a much larger and stronger frame. It is only natural that this really worth-while improvement should come from the "FROST" factory, where all the others have originated.

Get This Extra Strong Gate From The Agents Of The Original Makers.

It is the result of seventeen years of experience in Gate making. Not only is this import-

ant but also the fact that during these seventeen years the Frost Company have manufactured and sold an ever-increasing number of Gates each year.

The satisfactory service given by Frost Gates in past years can be assured to even a greater extent in this new product. The filling is close and carefully fastened to frame; each wire is well bound. The fastening on this large gate is a chain, making it safe and secure for every purpose.

This new Gate combines extra value, extra strength and extra service and you get it at a cost that is little above the cost of the smaller frame gate.

Order early as the supply this Spring will be limited.
