

SOUVENIR'S

**Distinctive
Feature**

IS ITS

Aerated Oven

1. Where the fresh air enters.
2. Circulating fresh air flue and where it becomes heated.
3. Fresh heated air entering the oven.
4. Indicates the action of the air in passing through the oven.
5. Exit flue for impure air.
6. Back view of fire box.

THE one worry of the good housewife is the cooking. All skill is exercised in the preparation of the food, and everything is ready for the oven. She has watched with care the building of her fire; the oven is at prime heat, and surely there can be no mistake. But, alas, her work is spoiled in the cooking. Something has gone wrong.

We can speak universally when we say that these are mishaps that do not occur if a Souvenir range with aerated oven is used, for the principle of the aerated oven renders the stove proof against these troubles.

It is worth while any reader sending to us direct or obtaining from an agent near by, our little booklet telling in simple and untechnical terms why the aerated oven has made the Souvenir the greatest stove of the 19th century.

Aerated ovens are **Lined with Aluminum**. Like a new silver dollar, they never tarnish, and are always **clean and sweet**.

SOUVENIRS are the most perfect in construction and convenience. They do not cost any more, and will give a longer and better service.
