Export Contact: Mr. Doug Bishop, Owner

Marketing Profile

Founded over twenty-five years ago, F.A.E. (Fluid Air Electric) Sales and Service Ltd., has become Canada's leading manufacturer of hot and cold pressure cleaning equipment.

The company's current line of pressure washers, WATER WACKER, range from the small 2.2 G.P.M. at 1000 P.S.I. unit, up to and including a 5 G.P.M. at 4000 P.S.I. machine. At present, the company has in excess of one hundred different models to choose from, including an all-new design that is built right into a building at the time of construction. F.A.E. also custom designs and builds units for special applications. Water Wacker hot units and separate heater units are either natural gas, propane, or diesel fired, and come with a variety of safety and gas approvals (i.e. CGA/CSA and CCEMA). These products are normally sold through distributors to the end-users. Water Wacker products are presently being operated throughout North America, from as far north as the Canadian Arctic to the Mexican/U.S. border and the Caribbean in the south. Its simple, uncomplicated designs, along with the use of high quality components have made Water Wacker one of the most durable units on today's market.
