

Government of India, which is represented on the Scientific Committee

of the

The lines of enquiry and avenues for starting research and studies in the field of radiation and its effects on man and animals are indicated in the report. It is noted that the general feeling in the Committee is that

a study is being done on the subject in India in a rather haphazard manner and that it is necessary to have a coordinated effort in this field.

It is suggested that the Government should take steps to organize a

central body to coordinate the activities of the various departments

concerned in the field of radiation and its effects on man and animals.

It is also suggested that the Government should take steps to

encourage research in this field by providing financial assistance

to individuals and institutions engaged in such research.

It is further suggested that the Government should take steps to

organize a national conference on radiation and its effects on man

and animals in order to discuss the various aspects of the problem

and to formulate a plan of action for the future.

The Committee also suggests that the Government should take steps to

improve the standards of living in India, as this will help to

reduce the incidence of radiation-induced diseases.

It is also suggested that the Government should take steps to

organize a national committee on radiation and its effects on man

and animals in order to coordinate the activities of the various

departments concerned in the field.

It is further suggested that the Government should take steps to

encourage research in this field by providing financial assistance

to individuals and institutions engaged in such research.

It is also suggested that the Government should take steps to

organize a national conference on radiation and its effects on man

and animals in order to discuss the various aspects of the problem
