paratively new method of treating gold ores, known as the bromo-cyanogen process. This was invented a couple of years since by H. L. Sulman and Dr. Tweed of London, Eng., and is the method employed by the British syndicate which is working the Deloro mines in Hastings County, Ont. By this method the cyanide of potassium used for immersing the ore is much weaker than that employed by McArthur and Siemens. Instead of adding to it a second wash of the same character, .025 per cent. of bromide of cyanogen is afterward contributed to the mixture, and the copsequences are re-

mixture, and the consequences are remarkable.

The gold, even if associated with such refractory ores as copper, arsenic and antimony, is dissolved in less than half the time occupied by rival methods. No deleterious products, such as caustic potash, are formed and, consequently, no loss of time or material is entailed by weakening the cyanide solution. Time is also saved by the necessity of oxygenation being abolished. The precipitation of the gold is secured almost instantaneously by using zinc fume dust, which is added through a precipitation cone, and kept constantly agitated in the solution.

It is found that but a slight quantity of the zinc dust is dissolved, and consequently no great loss of cyanide by deterioration is thus caused, nor is there much loss of gold by volatilisation in smelting afterwards, as in the case where zinc slimes are largely present. In 15 to 24 hours the bromocyanide process will precipitate practically all the gold out of the material, which by the other processes would require three or four days for extraction.

# egitimate Mining vs. Speculative Mining

## TO MINING INVESTORS

We invite your careful consideration for the prospectus of the Colorado Gold Mining and Development Company and its auxiliary, the Kootenay Exploration Company, Limited.

As you will notice by the plan presented, our proposition is purely a business one, we confining our attention to working only such properties as have been sufficiently developed to show a profit over our original investment, and as we work collectively an unlimited number of these claims, it gives us an opportunity of presenting an investment of unquestioned superiority.

The groups of properties now under con- and Mining. trol of these companies are the most import- CAPITAL \$2,000,000, DIVIDED INTO 2,000,000 SHARES OF \$1.00 FACH. ant yet offered in the Dominion under one management.

There are many mining companies that have valuable properties, but have not the means to develop them, and it is this class only that we take up and work for the profit in sight. If there is more beyond, we are so much better off, but we do not hazard our original investment, therefore the element of loss so prominent in the average mining venture, is practically

Another favorable feature is that every shareholder parti-

Another favorable feature is that every shareholder partivested, no stock being set aside for an officer or director, except as it is subscribed and paid for the same as by every other shareholder, and all are equal partners as their interests may appear.

This is worthy of the favorable consideration of the small investor, for until the Colorado Gold Mining and Development Company was brought out, never before did the small shareholder have an equal chance with the promoters of the company.

The magnificent success achieved by the parent company during the past nine months is sufficient indication of what can be done on these lines under competent management.

We anticipate equally gratifying results for the Kootenay Exploration Company, Limited, and will be pleased to have cipates in the profits in direct proportion to the amount in-
